APPENDIX 213
EVALUATION OF PAST ACTIVITIES 214
INTRODUCTION
PROJECT OVERVIEW

Project Goals

This Community Health Needs Assessment, a follow-up to similar studies conducted in 2016 and 2019, is a systematic, data-driven approach to determining the health status, behaviors, and needs of residents in the Total Area, the service area of Augusta Health. Subsequently, this information may be used to inform decisions and guide efforts to improve community health and wellness.

A Community Health Needs Assessment provides information so that communities may identify issues of greatest concern and decide to commit resources to those areas, thereby making the greatest possible impact on community health status. This Community Health Needs Assessment will serve as a tool toward reaching three basic goals:

- To improve residents’ health status, increase their life spans, and elevate their overall quality of life. A healthy community is not only one where its residents suffer little from physical and mental illness, but also one where its residents enjoy a high quality of life.

- To reduce the health disparities among residents. By gathering demographic information along with health status and behavior data, it will be possible to identify population segments that are most at-risk for various diseases and injuries. Intervention plans aimed at targeting these individuals may then be developed to combat some of the socio-economic factors that historically have had a negative impact on residents’ health.

- To increase accessibility to preventive services for all community residents. More accessible preventive services will prove beneficial in accomplishing the first goal (improving health status, increasing life spans, and elevating the quality of life), as well as lowering the costs associated with caring for late-stage diseases resulting from a lack of preventive care.

This assessment was conducted on behalf of Augusta Health by PRC, a nationally recognized health care consulting firm with extensive experience conducting Community Health Needs Assessments in hundreds of communities across the United States since 1994.

Methodology

This assessment incorporates data from multiple sources, including primary research (through the PRC Community Health Survey and PRC Online Key Informant Survey), as well as secondary research (vital statistics and other existing health-related data). It also allows for trending and comparison to benchmark data at the state and national levels.

PRC Community Health Survey

Survey Instrument

The survey instrument used for this study is based largely on the Centers for Disease Control and Prevention (CDC) Behavioral Risk Factor Surveillance System (BRFSS), as well as various other public health surveys and customized questions addressing gaps in indicator data relative to health promotion and disease prevention objectives and other recognized health issues. The final survey instrument was developed by Augusta Health and PRC and is similar to the previous surveys used in the region, allowing for data trending.
Community Defined for This Assessment

The study area for the survey effort (referred to as the “Total Area” in this report) is defined as each of the residential ZIP Codes comprising Augusta County and the independent cities of Staunton and Waynesboro in Virginia. This community definition, determined based on the ZIP Codes of residence of recent patients of Augusta Health, is illustrated in the following map.

Sample Approach & Design

A precise and carefully executed methodology is critical in asserting the validity of the results gathered in the PRC Community Health Survey. Thus, to ensure the best representation of the population surveyed a mixed-mode methodology was implemented. This included surveys conducted via telephone (landline and cell phone), as well as through online questionnaires.

The sample design used for this effort consisted of a sample of 756 individuals age 18 and older in the Total Area (600 reached through a phone survey, and another 156 achieved through an online survey link promoted by Augusta Health). In all, the final sample included 185 residents in Staunton, 170 in Waynesboro, and 401 in Augusta County. Once the interviews were completed, these were weighted in proportion to the actual population distribution so as to appropriately represent the Total Area as a whole. All administration of the surveys, data collection, and data analysis was conducted by PRC.

For statistical purposes, the maximum rate of error associated with a sample size of 756 respondents is ±3.6% at the 95 percent confidence level.
Note:  The "response rate" (the percentage of a population giving a particular response) determines the error rate associated with that response. A "95 percent level of confidence" indicates that responses would fall within the expected error range on 95 out of 100 trials.

Examples:
- If 10% of the sample of 756 respondents answered a certain question with a "yes," it can be asserted that between 7.9% and 12.1% (10% ± 2.1%) of the total population would offer this response.
- If 50% of respondents said "yes," one could be certain with a 95 percent level of confidence that between 46.4% and 53.6% (50% ± 3.6%) of the total population would respond "yes" if asked this question.

Sample Characteristics

To accurately represent the population studied, PRC strives to minimize bias through application of a proven telephone methodology and random-selection techniques. While this random sampling of the population produces a highly representative sample, it is a common and preferred practice to "weight" the raw data to improve this representativeness even further. This is accomplished by adjusting the results of a random sample to match the geographic distribution and demographic characteristics of the population surveyed (poststratification), so as to eliminate any naturally occurring bias. Specifically, once the raw data are gathered, respondents are examined by key demographic characteristics (namely sex, age, race, ethnicity, and poverty status), and a statistical application package applies weighting variables that produce a sample which more closely matches the population for these characteristics. Thus, while the integrity of each individual's responses is maintained, one respondent's responses may contribute to the whole the same weight as, for example, 1.1 respondents. Another respondent, whose demographic characteristics may have been slightly oversampled, may contribute the same weight as 0.9 respondents.

The following chart outlines the characteristics of the Total Area sample for key demographic variables, compared to actual population characteristics revealed in census data. [Note that the sample consisted solely of area residents age 18 and older; data on children were given by proxy by the person most responsible for that child's health care needs, and these children are not represented demographically in this chart.]
Population & Survey Sample Characteristics
(Total Area, 2022)

Notes: FPL is federal poverty level, based on guidelines established by the US Department of Health & Human Services.

The sample design and the quality control procedures used in the data collection ensure that the sample is representative. Thus, the findings may be generalized to the total population of community members in the defined area with a high degree of confidence.

**INCOME & RACE/ETHNICITY**

**INCOME**  ► Poverty descriptions and segmentation used in this report are based on administrative poverty thresholds determined by the US Department of Health & Human Services. These guidelines define poverty status by household income level and number of persons in the household (e.g., the 2021 guidelines place the poverty threshold for a family of four at $26,500 annual household income or lower). In sample segmentation: “low income” refers to community members living in a household with defined poverty status or living just above the poverty level, earning up to twice (<200% of) the poverty threshold; “mid/high income” refers to those households living on incomes which are twice or more (≥200% of) the federal poverty level.

**RACE & ETHNICITY**  ► “White” reflects non-Hispanic White respondents; “communities of color” includes Hispanics and non-White race groups. While the survey data are representative of the racial and ethnic makeup of the population, the samples for Hispanic and non-White race groups were not of sufficient size for independent analysis.

**Online Key Informant Survey**

To solicit input from key informants, those individuals who have a broad interest in the health of the community, an Online Key Informant Survey also was implemented as part of this process. A list of recommended participants was provided by Augusta Health; this list included names and contact information for physicians, public health representatives, other health professionals, social service providers, and a variety of other community leaders. Potential participants were chosen because of their ability to identify primary concerns of the populations with whom they work, as well as of the community overall.

Key informants were contacted by email, introducing the purpose of the survey and providing a link to take the survey online; reminder emails were sent as needed to increase participation. In all, 175 community stakeholders took part in the Online Key Informant Survey, as outlined below:
## Online Key Informant Survey Participation

<table>

</tbody>
</table>

Final participation included representatives of the organizations outlined below.

- Adagio House
- Allegheny Mountain Institute
- Allen Chapel
- American Cancer Society
- ARROW Project
- Augusta County Schools
- Augusta County
- Augusta Free Press
- Augusta Health
- Augusta Health Boards and Committees
- Augusta Health Home Health
- Augusta Health Hospice
- Augusta Health Patient Advisory Council
- Augusta Health/Augusta Care Partners
- Augusta Health/Sodexo
- Augusta Medical Group
- Augusta Nursing and Rehab
- Augusta Regional Dental Clinic
- Blue Ridge Area Food Bank
- Blue Ridge CASA
- Blue Ridge Community College
- Blue Ridge Court Services
- Brain Injury Connections
- BRCC Educational Foundation
- Bridge Christian Church
- Central Shenandoah Planning District
- City of Staunton
- City of Waynesboro
- Commonwealth Center for Children
- Community Action Partnership of Staunton, Augusta, and Waynesboro
- Community Foundation for the Central Blue Ridge
- Covenant Presbyterian
- Creative Works Farm
- Disciples Kitchen
- Dixie Gas and Oil/Quarles
- Ebenezer Baptist Church, Staunton
- Graphic Packaging International
- Greater Augusta Regional Chamber of Commerce
- Gypsy Hill House
- Houff Corporation
- Jones Garden
- Latinx Health Council
- LEARN
- LIFEworks
- Love INC
- Lyndhurst United Methodist Church
- Mental Health of America-Augusta
- Murphy Deming College of Health Sciences
- National Alliance of Mental Illness
- Office on Youth
- Plaza Apartments
- Renewing Homes
- Shenandoah LGBTQ Center
- Shenandoah Valley Airport
- Shenandoah Valley Partnership
- Shenandoah Valley Social Services
- Sin Barreras
- St. John Catholic Church
- Staunton-Augusta Rescue Squad
- Staunton Schools
- United Way
- Valley Career and Technical Center
- Valley Children’s Advocacy Center
Through this process, input was gathered from several individuals whose organizations work with low-income, minority, or other medically underserved populations.

In the online survey, key informants were asked to rate the degree to which various health issues are a problem in their own community. Follow-up questions asked them to describe why they identify problem areas as such and how these might better be addressed. Results of their ratings, as well as their verbatim comments, are included throughout this report as they relate to the various other data presented.

NOTE: These findings represent qualitative rather than quantitative data. The Online Key Informant Survey was designed to gather input regarding participants’ opinions and perceptions of the health needs of the residents in the area.

Public Health, Vital Statistics & Other Data

A variety of existing (secondary) data sources was consulted to complement the research quality of this Community Health Needs Assessment. Data for the Total Area were obtained from the following sources (specific citations are included with the graphs throughout this report):

- Center for Applied Research and Engagement Systems (CARES), University of Missouri Extension, SparkMap (sparkmap.org)
- Centers for Disease Control & Prevention, Office of Infectious Disease, National Center for HIV/AIDS, Viral Hepatitis, STD, and TB Prevention
- Centers for Disease Control & Prevention, Office of Public Health Science Services, Center for Surveillance, Epidemiology and Laboratory Services, Division of Health Informatics and Surveillance (DHIS)
- Centers for Disease Control & Prevention, Office of Public Health Science Services, National Center for Health Statistics
- ESRI ArcGIS Map Gallery
- National Cancer Institute, State Cancer Profiles
- OpenStreetMap (OSM)
- US Census Bureau, American Community Survey
- US Census Bureau, County Business Patterns
- US Census Bureau, Decennial Census
- US Department of Agriculture, Economic Research Service
- US Department of Health & Human Services
- US Department of Health & Human Services, Health Resources and Services Administration (HRSA)
- US Department of Justice, Federal Bureau of Investigation
- US Department of Labor, Bureau of Labor Statistics
- Virginia Department of Health
Benchmark Data

Trending

Similar surveys were administered in the Total Area in 2016 and 2019 by PRC on behalf of Augusta Health. Trending data, as revealed by comparison to prior survey results, are provided throughout this report whenever available. Historical data for secondary data indicators are also included for the purposes of trending.

Virginia Risk Factor Data

Statewide risk factor data are provided where available as an additional benchmark against which to compare local survey findings; these data represent the most recent BRFSS (Behavioral Risk Factor Surveillance System) Prevalence and Trends Data published online by the Centers for Disease Control and Prevention. State-level vital statistics are also provided for comparison of secondary data indicators.

Nationwide Risk Factor Data

Nationwide risk factor data, which are also provided in comparison charts, are taken from the 2020 PRC National Health Survey; the methodological approach for the national study is similar to that employed in this assessment, and these data may be generalized to the US population with a high degree of confidence. National-level vital statistics are also provided for comparison of secondary data indicators.

Healthy People 2030

Healthy People provides 10-year, measurable public health objectives — and tools to help track progress toward achieving them. Healthy People identifies public health priorities to help individuals, organizations, and communities across the United States improve health and well-being. Healthy People 2030, the initiative’s fifth iteration, builds on knowledge gained over the first four decades.

Healthy People 2030’s overarching goals are to:

- Attain healthy, thriving lives and well-being free of preventable disease, disability, injury, and premature death.
- Eliminate health disparities, achieve health equity, and attain health literacy to improve the health and well-being of all.
- Create social, physical, and economic environments that promote attaining the full potential for health and well-being for all.
- Promote healthy development, healthy behaviors, and well-being across all life stages.
- Engage leadership, key constituents, and the public across multiple sectors to take action and design policies that improve the health and well-being of all.

The Healthy People 2030 framework was based on recommendations made by the Secretary’s Advisory Committee on National Health Promotion and Disease Prevention Objectives for 2030. After getting feedback from individuals and organizations and input from subject matter experts, the U.S. Department of Health and Human Services (HHS) approved the framework which helped guide the selection of Healthy People 2030 objectives.

Determining Significance

Differences noted in this report represent those determined to be significant. For survey-derived indicators (which are subject to sampling error), statistical significance is determined based on confidence intervals (at the 95 percent confidence level), using question-specific samples and response rates. For the purpose of this report, “significance” of secondary data indicators (which do not carry sampling error but might be subject to reporting error) is determined by a 15% variation from the comparative measure.
Information Gaps

While this assessment is quite comprehensive, it cannot measure all possible aspects of health in the community, nor can it adequately represent all possible populations of interest. It must be recognized that these information gaps might in some ways limit the ability to assess all of the community’s health needs.

For example, certain population groups — such as those who only speak a language other than English or Spanish — are not represented in the survey data. Other population groups — for example, pregnant women, lesbian/gay/bisexual/transgender residents, undocumented residents, and members of certain racial/ethnic or immigrant groups — although included, might not be identifiable or might be represented in numbers too small for independent analyses.

In terms of content, this assessment was designed to provide a comprehensive and broad picture of the health of the overall community. However, there are certainly medical conditions that are not specifically addressed.

Public Comment

Augusta Health made its prior Community Health Needs Assessment (CHNA) report publicly available through its website; through that mechanism, the hospital requested from the public written comments and feedback regarding the CHNA and implementation strategy. At the time of this writing, Augusta Health had not received any written comments. However, through population surveys and key informant feedback for this assessment, input from the broader community was considered and taken into account when identifying and prioritizing the significant health needs of the community. Augusta Health will continue to use its website as a tool to solicit public comments and ensure that these comments are considered in the development of future CHNAs.
For non-profit hospitals, a Community Health Needs Assessment (CHNA) also serves to satisfy certain requirements of tax reporting, pursuant to provisions of the Patient Protection & Affordable Care Act of 2010. To understand which elements of this report relate to those requested as part of hospitals’ reporting on IRS Schedule H (Form 990), the following table cross-references related sections.

SUMMARY OF FINDINGS

Significant Health Needs of the Community

The following “Areas of Opportunity” represent the significant health needs of the community, based on the information gathered through this Community Health Needs Assessment. From these data, opportunities for health improvement exist in the area with regard to the following health issues (see also the summary tables presented in the following section).

The Areas of Opportunity were determined after consideration of various criteria, including: standing in comparison with benchmark data (particularly national data); identified trends; the preponderance of significant findings within topic areas; the magnitude of the issue in terms of the number of persons affected; and the potential health impact of a given issue. These also take into account those issues of greatest concern to the community stakeholders (key informants) giving input to this process.

Community Feedback on Prioritization of Health Needs

On July 27, 2022, Augusta Health convened an online meeting with 95 community stakeholders (representing a cross-section of community-based agencies and organizations) to evaluate, discuss and prioritize health issues for community, based on findings of this Community Health Needs Assessment (CHNA). Professional Research Consultants, Inc. (PRC) began the meeting with a presentation of key findings from the CHNA, highlighting the significant health issues identified from the research (see Areas of Opportunity above). Following the data review, PRC answered any questions. Finally, participants were provided an overview of the prioritization exercise that followed.

In order to assign priority to the identified health needs (i.e., Areas of Opportunity), an online voting platform was used in which each participant was able to register his/her ratings using a web browser. The participants were asked to evaluate each health issue along two criteria:

- **SCOPE & SEVERITY** — The first rating was to gauge the magnitude of the problem in consideration of the following:
  - How many people are affected?
  - How does the local community data compare to state or national levels, or Healthy People 2030 targets?
  - To what degree does each health issue lead to death or disability, impair quality of life, or impact other health issues?

  Ratings were entered on a scale of 1 (not very prevalent at all, with only minimal health consequences) to 10 (extremely prevalent, with very serious health consequences).

- **ABILITY TO IMPACT** — A second rating was designed to measure the perceived likelihood of the hospital having a positive impact on each health issue, given available resources, competencies, spheres of influence, etc. Ratings were entered on a scale of 1 (no ability to impact) to 10 (great ability to impact).

Individuals’ ratings for each criteria were averaged for each tested health issue, and then these composite criteria scores were averaged to produce an overall score. This process yielded the following prioritized list of community health needs:

1. Mental Health
2. Access to Health Care Services
3. Nutrition, Physical Activity & Weight
4. Diabetes
5. Substance Abuse
6. Heart Disease & Stroke
7. Cancer
8. Housing
9. Infant Health & Family Planning
10. Tobacco Use
11. Oral Health
12. Injury & Violence
13. Potentially Disabling Conditions
14. Respiratory Disease
Hospital Implementation Strategy

Augusta Health will use the information from this Community Health Needs Assessment to develop an Implementation Strategy to address the significant health needs in the community. While the hospital will likely not implement strategies for all of the health issues listed above, the results of this prioritization exercise will be used to inform the development of the hospital’s action plan to guide community health improvement efforts in the coming years.

Note: An evaluation of the hospital’s past activities to address the needs identified in prior CHNAs can be found as an appendix to this report.
Summary Tables:
Comparisons With Benchmark Data

Reading the Summary Tables

- In the following tables, Total Area results are shown in the larger, gray column.

- The columns to the left of the Total Area column provide comparisons among the county and independent cities, identifying differences for each as “better than” (○), “worse than” (●), or “similar to” (○) the combined opposing areas.

- The columns to the right of the Total Area column provide trending, as well as comparisons between local data and any available state and national findings, and Healthy People 2030 objectives. Again, symbols indicate whether the Total Area compares favorably (○), unfavorably (●), or comparably (○) to these external data.

Note that blank table cells signify that data are not available or are not reliable for that area and/or for that indicator.

Tip: Indicator labels beginning with a “%” symbol are taken from the PRC Community Health Survey; the remaining indicators are taken from secondary data sources.

### Population Change 2010-2020

A significant positive or negative shift in total population over time impacts health care providers and the utilization of community resources.

**Between the 2010 and 2020 US Censuses, the population of the Total Area increased by 6,932 persons, or 5.9%.

- **BENCHMARK ➤** Lower than state and US increases.
- **DISPARITY ➤** The highest percentage increase was recorded in Staunton.
Change in Total Population
(Percentage Change Between 2010 and 2020)

This map shows the areas of greatest increase or decrease in population between 2010 and 2020.

Sources:

Notes:
- A significant positive or negative shift in total population over time impacts health care providers and the utilization of community resources.
Urban/Rural Population

Urban areas are identified using population density, count, and size thresholds. Urban areas also include territory with a high degree of impervious surface (development). Rural areas are all areas that are not urban.

More than half of the Total Area population (57.5%) lives in areas designated as urban.

BENCHMARK ➤ The Total Area is less urban than the state of Virginia and the US.

DISPARITY ➤ While Staunton and Waynesboro are predominantly urban, Augusta County is more rural than urban.

Notes: This indicator reports the percentage of population living in urban and rural areas. Urban areas are identified using population density, count, and size thresholds. Urban areas also include territory with a high degree of impervious surface (development). Rural areas are all areas that are not urban.

Note the following map, outlining the urban population in the Total Area.
Age

It is important to understand the age distribution of the population, as different age groups have unique health needs that should be considered separately from others along the age spectrum.

In the Total Area, 19.9% of the population are children age 0-17; another 60.1% are age 18 to 64, while 20.1% are age 65 and older.

BENCHMARK ➤ Similar to statewide and national proportions.

DISPARITY ➤ Waynesboro has a higher proportion of children than Staunton or Augusta County.

The following map provides an illustration of the median age in the Total Area.

Race & Ethnicity

Race

In looking at race independent of ethnicity (Hispanic or Latino origin), 88.7% of Total Area residents are White and 7.5% are Black.

BENCHMARK ► Less diverse than the state and nation.

DISPARITY ► Augusta County is less diverse than either Staunton or Waynesboro.

Total Population by Race Alone
(2015-2019)

- White  - Black  - Some Other Race  - Multiple Races

Sources:  
- US Census Bureau American Community Survey 5-year estimates.  
Ethnicity

A total of 3.8% of Total Area residents are Hispanic or Latino.

**BENCHMARK** ► Lower than statewide and especially national proportions.

**DISPARITY** ► Waynesboro has a higher proportion of Hispanic residents.

### Hispanic Population (2015-2019)

<table>

Notes: • Origin can be viewed as the heritage, nationality group, lineage, or country of birth of the person or the person’s parents or ancestors before their arrival in the United States. People who identify their origin as Hispanic, Latino, or Spanish may be of any race.
Note the following map illustrating linguistic isolation throughout the Total Area.
ABOUT SOCIAL DETERMINANTS OF HEALTH

Social determinants of health (SDOH) are the conditions in the environments where people are born, live, learn, work, play, worship, and age that affect a wide range of health, functioning, and quality-of-life outcomes and risks.

Social determinants of health (SDOH) have a major impact on people’s health, well-being, and quality of life. Examples of SDOH include:

- Safe housing, transportation, and neighborhoods
- Racism, discrimination, and violence
- Education, job opportunities, and income
- Access to nutritious foods and physical activity opportunities
- Polluted air and water
- Language and literacy skills

SDOH also contribute to wide health disparities and inequities. For example, people who don’t have access to grocery stores with healthy foods are less likely to have good nutrition. That raises their risk of health conditions like heart disease, diabetes, and obesity — and even lowers life expectancy relative to people who do have access to healthy foods.

Just promoting healthy choices won’t eliminate these and other health disparities. Instead, public health organizations and their partners in sectors like education, transportation, and housing need to take action to improve the conditions in people’s environments.

- Healthy People 2030 (https://health.gov/healthypeople)

Poverty

The latest census estimate shows 10.7% of the Total Area population living below the federal poverty level.

BENCHMARK ➤ Better overall than the US finding. Fails to satisfy the Healthy People 2030 objective.

DISPARITY ➤ Particularly high in Waynesboro.

Among just children (ages 0 to 17), this percentage in the Total Area is 14.9% (representing an estimated 3,515 children).

BENCHMARK ➤ Better overall than the US finding. Fails to satisfy the Healthy People 2030 objective.

DISPARITY ➤ Particularly high in Waynesboro.
Population in Poverty
(Populations Living Below the Poverty Level; 2015-2019)
Healthy People 2030 = 8.0% or Lower

- Total Population
- Children

 Sources: 
- US Census Bureau American Community Survey 5-year estimates.

Notes: Poverty is considered a key driver of health status. This indicator is relevant because poverty creates barriers to access including health services, healthy food, and other necessities that contribute to poor health status.

The following maps highlight concentrations of persons living below the federal poverty level.
Education

Among the Total Area population age 25 and older, an estimated 12.4% (nearly 11,000 people) do not have a high school education.

BENCHMARK ➤ Less favorable than found across Virginia.

DISPARITY ➤ Lowest in Staunton.

Population With No High School Diploma

**Notes:** Asked of all respondents.

### Key Informant Input: Housing

Note the following input from key informants related to housing:

**Homelessness**

Homelessness. Housing is health care. No one can address chronic or major health issues if they are sleeping outside and can address it only minimally in a shelter. How can one focus on managing diabetes when someone else feeds them? How can they decide to pursue sobriety when they don’t know where they’re sleeping tonight? How can they prioritize attending PCP appointments if they are struggling to survive? How are they going to get to their PCP appointments? If they had the means to do that, they wouldn’t be homeless. Homelessness is not something anyone chooses, just like trauma isn’t something anyone chooses. It happens to people. We need to be asking what happened to them. We need to stop acting, as a community and a nation, like it’s some kind of character flaw that causes people to be homeless. I live in a two-income family and STILL qualify for financial assistance with Augusta Health. Any of us could be one more traumatic event and be in the same position – homeless. – Social Services Provider

Homelessness. I was surprised it wasn’t a part of the survey, unless I just missed it somehow. There are homeless people everywhere and especially low-income, mentally ill, substance-using people. This is a major problem. – Social Services Provider

**Lack of Affordable Housing**

Lack of affordable/permanent supportive housing. Housing is healthcare; those who are experiencing homelessness are often unable to address their healthcare needs. – Other Health Provider

Lack of affordable housing. – Other Health Provider

**Contributing Factors**

Food insecurity and homelessness. – Other Health Provider

Homelessness and affordable housing. – Other Health Provider
Transportation

While most area residents own their own vehicle, 7.6% do not and must get rides from someone else, use public transport, or walk as their primary means of transportation.

![Primary Means of Transportation](chart)

**Sources:**
- 2022 PRC Community Health Survey, PRC, Inc. [Item 306]
**Notes:**
- Asked of all respondents.

Food Access

Low Food Access

US Department of Agriculture data show that 21.7% of the Total Area population (representing over 25,000 residents) have low food access, meaning that they do not live near a supermarket or large grocery store.

**DISPARITY ➤** Considerably higher in Augusta County.

**Population With Low Food Access**

(Percent of Population That Is Far From a Supermarket or Large Grocery Store, 2019)

![Food Access](chart)

**Sources:**
**Notes:**
- This indicator reports the percentage of the population with low food access. Low food access is defined as living more than ½ mile from the nearest supermarket, supercenter, or large grocery store. This indicator is relevant because it highlights populations and geographies facing food insecurity.
Overall, 20.8% of community residents are determined to be “food insecure,” having run out of food in the past year and/or been worried about running out of food.

**BENCHMARK** ► Much lower than the US percentage.

**TREND** ► Significantly higher than the 2016 benchmark.

**DISPARITY** ► Women, younger adults, and especially lower-income residents are more likely to report being food insecure.

---

Surveyed adults were asked: “Now I am going to read two statements that people have made about their food situation. Please tell me whether each statement was “Often True,” “Sometimes True,” or “Never True” for you in the past 12 months:

- I worried about whether our food would run out before we got money to buy more.
- The food that we bought just did not last, and we did not have money to get more.”

Those answering “Often” or “Sometimes True” for either statement are considered to be food insecure.

MENTAL HEALTH

ABOUT MENTAL HEALTH & MENTAL DISORDERS

About half of all people in the United States will be diagnosed with a mental disorder at some point in their lifetime. …Mental disorders affect people of all age and racial/ethnic groups, but some populations are disproportionately affected. And estimates suggest that only half of all people with mental disorders get the treatment they need.

In addition, mental health and physical health are closely connected. Mental disorders like depression and anxiety can affect people’s ability to take part in healthy behaviors. Similarly, physical health problems can make it harder for people to get treatment for mental disorders. Increasing screening for mental disorders can help people get the treatment they need.

– Healthy People 2030 (https://health.gov/healthypeople)

Mental Health Status

Adults

Most Total Area adults rate their overall mental health favorably (“excellent,” “very good,” or “good”).

Self-Reported Mental Health Status
(Total Area, 2022)

Stress

Most surveyed adults characterize most days as no more than “moderately” stressful.

Perceived Level of Stress On a Typical Day
(Total Area, 2022)

In contrast, 14.5% of Total Area adults feel that most days for them are “very” or “extremely” stressful.

TREND ► Significantly higher than the 2016 benchmark.

DISPARITY ► More often reported among women, adults younger than 65, and White residents.

Perceive Most Days As “Extremely” or “Very” Stressful

Suicide

In the Total Area, there were 22.7 suicides per 100,000 population (2018-2020 annual average age-adjusted rate).

BENCHMARK ► Higher than the state and US rates. Fails to satisfy the Healthy People 2030 objective.

TREND ► Trending significantly higher in recent years.

DISPARITY ► Higher in Waynesboro.

Notes:
- This indicator reports the rate of the county population to the number of mental health providers including psychiatrists, psychologists, clinical social workers, and counsellors that specialize in mental health care.
Currently Receiving Treatment

A total of 22.9% of area adults are currently taking medication or otherwise receiving treatment from a doctor, nurse, or other health professional for some type of mental health condition or emotional problem.

BENCHMARK ► Less favorable than the US finding.
TREND ► Significantly higher than the 2016 benchmark.
DISPARITY ► Lower in Staunton.

Currently Receiving Mental Health Treatment

Among respondents ever diagnosed with a depressive disorder, 60.6% are currently receiving treatment.

Difficulty Accessing Mental Health Services

A total of 8.2% of Total Area adults report a time in the past year when they needed mental health services but were not able to get them.

TREND ► Rising significantly over time.
DISPARITY ► More often reported among women, adults younger than 65, and lower-income adults.

Sources: 2022 PRC Community Health Survey, PRC, Inc. [Item 95]
Notes: Asked of all respondents.
Key Informant Input: Mental Health

A high percentage of key informants taking part in an online survey characterized Mental Health as a “major problem” in the community.

Perceptions of Mental Health as a Problem in the Community (Key Informants, 2022)

- Major Problem: 78.4%
- Moderate Problem: 17.3%
- Minor Problem: 3.1%
- No Problem At All: 1.2%

Sources: PRC Online Key Informant Survey, PRC, Inc.
Notes: Asked of all respondents.

Among those rating this issue as a “major problem,” reasons related to the following:

Access to Care/Services

- Having services when they need them. – Community Leader
- Open beds for treatment. Strong outpatient support. – Other Health Provider
- Lack of outpatient therapy options. Ability to pay for services. Lack of short-term inpatient facilities or care before transitioning to outpatient therapy. – Other Health Provider
- Lack of mental health offerings for people with minimal concerns and since they are addressed early, they get worse. – Other Health Provider
- Residential treatment and lack of psychiatrists willing to treat all patients. – Other Health Provider
- Severe lack of services, especially residential services for those in crisis. – Other Health Provider
- Access to timely and appropriate level care. Our area lacks robust options for crisis management (Crisis Stabilization Unit, mobile crisis teams, etc.). – Community Leader
- Access to care. It takes over two months to get an initial appointment. – Other Health Provider
- Lack of both outpatient and inpatient resources to help person suffering with mental health disorders. Need more, and more accessible, mental health providers. – Community Leader
- Access to all levels of mental health care is needed, although, focusing on drug and alcohol abuse and chemical dependency is often behind mental health issues. So, providing more facilities for this need would go a long way. – Other Health Provider
- Access to behavioral health beds; related substance abuse issues; burdens on health system and local law enforcement. Virginia needs to take a larger role in this issue and provide beds and resources to allow proper, swift placement of behavioral health patients. – Other Health Provider
- Access to services, funding for services. Inadequate in and outpatient services, mostly because of funding. – Physician
- Access to care. Licensed therapists have long waitlists and few take insurance, due to the challenges inherent in working with insurance companies, from clawbacks to initial denials, that are nearly impossible to overcome without a dedicated billing staff. – Other Health Provider
- Access to mental health services. Most individuals wait weeks/months for an appointment while experiencing a mental health crisis. Also, individuals who have mental capacity concerns often cannot get an evaluation of their capacity, making it difficult when they are making poor choices. – Social Services Provider
- Lack of mental health experts in the community. There are a number of folks who deal with mental health issues that are not receiving the help they need and tend to be isolated from the main community. There is limited understanding within the community about mental health issues and what they can do to help. – Social Services Provider
- Access to care before issues become more severe. – Community Leader
- Access to care. – Physician
There are limited resources both statewide and at a local level and the entire mental health system is collapsing on itself. This is a critical need for our area and the recent expansion at Augusta Health is inadequate. – Community Leader

Access to appropriate long-term care. State facilities with staffing issues and not able to admit the patients as needed. – Community Leader

Lack of inpatient resources. Lack of alternatives to inpatient resources. Waits in the ED awaiting bed placement. Help with substance abuse, improved over last few years, but still lacking. – Physician

Access to care! Especially those with substance abuse problems. Community would benefit from a unique setting where people could receive both care for infections caused by opioid abuse (i.e. blood stream infection, wound infection, Hepatitis C, etc.) while receiving the mental health care to treat their primary problem (substance abuse and mental health) – Physician

Access/availability of MH counselors. There are resources once a person is in crisis, but there are long wait times for counseling (especially for children). – Other Health Provider

Access to services is so limited right now. Major demand for mental health services and waiting lists are long to get in and see a counselor/practitioner. Limited space in inpatient/residential treatment due to low staffing. – Other Health Provider

Establishing care in the community and maintaining that care relationship. – Physician

Not enough access to psychiatry and psychology and inability to get medication covered. – Physician

Limited access to longitudinal care. – Other Health Provider

I think there needs to just be more programs and providers. Those who need help seem to face quite a waiting list unless in acute crisis. – Other Health Provider

Lack of outpatient treatment options. – Other Health Provider

Lack of access to/education about availability of help. Area therapists have monthlong waiting lists. Valley Community Services Board has helpers, but finding and actually talking to them can prove quite difficult. – Community Leader

Access to quality care. – Community Leader

Services to support community participation, e.g., work, leisure. Non-crisis services. Crisis services. Physical health and wellness. – Other Health Provider

Access to care for their behavioral health issues. Management and follow up. There is nowhere for these patients to go. – Other Health Provider

Lack of access to care. Overwhelmed system that is not adequately funded and staffed. This is a nationwide issue that requires not only local attention but increased state and federal resources and attention. – Community Leader

Access to treatment. Waitlists are long, support groups to know how to recognize and how to deal with family members or for self. – Social Services Provider

Access to care, lack of mental/behavioral healthcare beds, lack of opportunities for supported housing and productive activity. – Public Health Representative

Lack of access for care. – Community Leader

Access to care. – Public Health Representative

Lack of consistent access to counseling services, particularly for adolescents and young adults. There were many adolescents during COVID who needed resources and were on waitlists for counselors or only able to meet once a month. – Community Leader

Access to care, limited facilities, mental health providers. – Other Health Provider

Access to care. Good mental health care (similar to good care in general) relies not only on excellence but also consistent and ongoing care from the same provider. Trust in the system is hard to overemphasize. – Physician

No services. – Social Services Provider

Lack of available services. Because of the pandemic, mental health services seem to be less available, while the need has increased. – Social Services Provider

Contributing Factors

Access to emergency services, including inpatient care. Excessive wait times. Reliance on law enforcement and ER to provide emergency assessment prior to escalation and care until inpatient care is available. Lack of providers, especially providers who accept insurance. – Community Leader

There is definitely a lack of resources in our community related to mental health services. Not enough clinicians and long waiting lists prohibit people from getting the care they need. There is also minimal diversity in the field, which also deters some individuals from receiving care. – Social Services Provider
Access to providers, medications, and emergency services. Mental health impacts how well you can manage other diseases such as your diabetes or heart disease. Long wait times for OPBH for counselling. Intake process at VCSB is quite difficult to navigate and even harder for the elderly and challenge patients. Poorly controlled mental health leads to emergency needs for hospitalizations. Many of the homeless have unmet mental issues that has led to them being homeless – Other Health Provider

Unable to get the care they need. One person may assess them and say they're fine and nothing gets done. No community support, going to VCSB is hard to get into — appts are months out, you have to wait a long time in waiting area, poor follow up. It’s sad there is also no education available for anyone having to deal with people who have mental illness. We have contacted WSH and they said that was not a service they provided. Who do you turn to for help managing this, there are roadblocks everywhere you turn? Navigating a system for this should not be this hard, it’s sad. – Other Health Provider

There has been a major increase in depression, anxiety, substance use, etc. Inpatient resources (i.e., residential facilities) are difficult to find, especially for adults. In addition, if admitted to a hospital for mental health stability, patients are often discharged either too soon and/or without the follow up support that is needed. Many people need consistent follow up and support in order to maintain compliance with medications and/or therapy. We need to get away from the stigma of mental health because many people will not seek help for that reason and/or because providers will not take the insurance (Medicaid, Medicare, etc.) – Other Health Provider

Access to care/providers. Cost for care/providers. Social stigma/lack of awareness. – Social Services Provider

Access to care, not enough providers, specifically not enough providers for kids, lack of awareness, stigma, etc. – Social Services Provider

Inadequate resources to address problems on both inpatient and outpatient basis. Housing issues compound the problem. With Western State in our community, many patients do not leave upon release creating larger issues for our community. Strains of pandemic have also exacerbated underlying problems. – Community Leader

Access to help, parents/guardians/family members that can’t commit or get services for another adult family member in need, misunderstanding of how to help, bullying in school leading to mental health issues, social media influence on mental health issues. – Community Leader

There are not enough mental health resources available, including providers and facilities. People with mental health issues often access the ED, but then have nowhere to go to seek help after that. Due to lack of insurance, they may also not be able to afford the intervention treatment that they need. There is also a stigma associated with mental health issues, which can prevent people from getting the care and help that they need. – Other Health Provider

There are inadequate outpatient services, state beds have closed, COVID has resulted in a dramatic increase in behavioral health issues. – Other Health Provider

Lack of services, lack of drug rehabilitation centers. Accessibility in finding providers and services, long wait times for services, transportation. – Other Health Provider

Access to care for inpatient and outpatient services. Lack of ability to pay for mental health services. – Other Health Provider

Lack of timely access to psychiatry services. Often wait list for local community services board (CSB) psychiatry. Very arduous track to get in with psychiatrist at CSB. Not enough case management services to assist patients with community living, especially intensive case management. Lack of affordable housing. Limited community living education. – Other Health Provider

Access to care in a timely manner due to the limited number of mental health professionals in the community in comparison to the number of patients in need. Also, a lack of resources and burnout within the primary care community to help manage patients with mental health needs. – Social Services Provider

Immediate access to care, crisis services, and consistent follow up care, stigma related to mental health, access to services for children, flexible scheduling for appointments, lack of expertise/access to trauma informed care. – Community Leader

The mental health system is broken across the state. People are essentially warehoused for mandatory but inept legal periods because of laws written by elected officials based on kneejerk, emotional reactions to situations that fit a narrative. There is no forethought into placing adequate facilities, staffing, and funding before enaction. There is no sense of individual choice or responsibility. The fallout created has put this state so far in the hole no amount of money would fix it in the foreseeable future. Individuals who go through the ECO/TDO process receive no real long-term help and are stuck with an LEO and medical staff who are berated for hours or days. The patient is often released with no substantive change. Law enforcement is stuck in the middle on non-criminal issues. It puts law enforcement in situations the laws do not cover. The ER and mental health facilities are regularly at or over capacity. There is a local need for a separate mental health/detox medical center. – Community Leader

The biggest challenges are access to mental health providers, access to face-to-face provision of mental health services since COVID, increase in suicide, increase in depression/anxiety, transportation to mental health appointments so that face-to-face sessions can occur, stigma related to obtaining counseling, and long psychiatry waitlists for all clients. – Social Services Provider

Access due to workforce shortage. Inability to pay if no insurance or Medicaid/Medicare. – Social Services Provider
Where to begin, this is my number one, not enough resources. Lots of stressors caused by COVID. More patients than counselors. Cost of healthcare, counseling and medication, too expensive for folks on tight household incomes. – Social Services Provider

Stigma, cost, lack of providers, lack of knowledge around navigating the system, transportation, folks who need treatment ending up in the justice system instead, not enough emphasis on trauma-informed approaches to working with clients and as an agency in general. – Social Services Provider

Those with psychological or psychiatric help. Those with an attachment to the Community Services Board – oversight of their diagnosed disease with frequency of visitation as a major issue. Finding housing for these individuals if they are without housing. Western State – finding housing to enable release from the hospital. – Social Services Provider

Stigma. Not affordable at all! Low-income families can get these sessions for free from many nonprofit agencies or with Medicaid; however, there are more appointments needed than counselors. Medium income (or “middle class”) are in a worse boat as they have insurance through an employer with high deductibles and end up saving money as a self-pay client. This is still $75–$150 on a sliding scale with nonprofit organizations for a paycheck-to-paycheck family. If they have a son or daughter needing counseling or themselves, that’s more than the price of daycare … and when it comes to mental health, it’s the first to get cut in the budget. More affordable counseling needs to be done for not just low-income, but those that do work and bring home an income that still can’t afford it. The sliding scales are still way too high. – Other Health Provider

Stigma, lack of low-cost counseling services, difficulty of accessing, lack of knowledge of where to go for help. Lack of funding for school programs. Lack of funding for services such as CSB programs impacting all areas of mental health. Lack of understanding of treatment. – Social Services Provider

Aside from the general stigma involved or associated with mental health, it seems to be very hard for people to find the resources they need and/or to financially pay for them when needed. Medication costs often seem to be an issue from what I have seen and heard. – Other Health Provider

Mental health stigmas – not wanting to get the help that you need. Lack of education at a young age about mental health to reduce those stigmas. Access to healthcare/ getting to and from appointments/cost of mental health services. HUGE lack of postpartum support for new mothers in our area. – Other Health Provider

Stigma. Lack of transportation or technology to access telehealth options. Homelessness. Lack of entitlements. Substance use disorder. Waiting lists. Procedures surrounding access to services are tricky and full of barriers. – Social Services Provider

Lack of providers – there are more individuals in need of support than there are providers to offer the needed services. Lack of awareness of supports – many community members are unaware of the providers/programs/options for finding and participating in mental health services. Lack of prevention services – commonly mental health distress comes to light when a person is in/has experienced a crisis. However, there is a benefit to participating in prevention services that can decrease the likelihood/impact of mental health distress. – Community Leader

Individuals don’t know the resources and availability of services. Lack of access is due to transportation issues, hours, or lack of providers. Individuals in the community do not always recognize the signs of mental health issues or concerns in themselves and others and if they do are unsure of steps to access help. – Social Services Provider

Realizing that resources are available and knowing how to access those resources. Cost. Stigma of admitting to mental health problems. – Community Leader

Mental health is either the main complaint or a complicating factor in many Augusta Health admissions. We do not have enough psychiatrists and other providers, especially for people living in poverty. – Other Health Provider

Lack of support, lack of education, lack of understanding from the general public. This mindset that it’s always somebody else having a mental health issue needs to stop. We are all humans and we all have a brain therefore we all need to take care of our own mental health. – Social Services Provider

There are many challenges for those with mental health issues. We have yet to locate a mental health medical professional (psychologist, psychiatrist, licensed therapists, etc.) that provides service in Spanish. We recently had to find a child psychologist for a client and the closest one we could find that speaks Spanish was in Harrisonburg, which is located almost an hour away. A related problem is cultural competency – non-Hispanic mental health professionals need to understand the community they are helping. There is also a general and not insignificant problem in the community itself, and that is prevailing stigma that remains about seeking and/or receiving treatment for mental health issues. – Social Services Provider

Culturally competent and affirmative treatment in ASL (American Sign Language). There are less than five providers who can sign and communicate directly with a deaf patient. ASL interpreters are available to facilitate communication and are also bound by HIPAA, but not all are trained in mental health terminology. Mental health information is also hard to find in accessible language formats. Wait times and insurance types accepted (which providers take Medicare or Medicare vs. private insurance or self-pay only) are additional barriers. – Social Services Provider

It seems that many individuals with mental health issues go undiagnosed. There continues to be a stigma about mental health, which possibly results in individuals not seeking help. – Community Leader

Stress due to high levels of low-income family situations. Lack of early intervention. – Social Services Provider
Lack of Providers

Insufficient mental health service providers, unable to meet the demands of the community, lack of short-term detox program, shortage of psychiatric hospital beds. – Other Health Provider

Insufficient number of mental health providers in this region. – Physician

Lack of providers and services in our area to meet the needs of everybody who needs support. – Social Services Provider

Access to support! We have a shortage of clinicians. – Social Services Provider

The biggest challenge is finding a provider who is able to see persons in a timely manner, and who accepts Medicaid or offers sliding scale (nonexistent). Many times, this results in crisis and clients need to have a TDO in place to be admitted to the hospital. This issue could also result in suicide, criminal activity, or harm to another person before the client is able to receive help. – Public Health Representative

Very limited number of providers, especially pediatric supports. – Social Services Provider

There are few community providers who are able to attract mental health providers to address the significant needs of children and youth in crisis in our community. – Community Leader

Lack of psychiatry physicians/absence of mental health professionals. – Other Health Provider

Lack of mental health providers. – Community Leader

Denial/Stigma

Discrimination, and fear of discrimination, can make mental health problems for many in our community worse. Many LGBTQ people also struggle to find affordable mental health services that are also affirming of their identities. – Social Services Provider

Mental health still has a stigma attached to it. Many people experiencing mental health issues are afraid to address them. – Community Leader

The stigma is still very real in this area, and we lack facilities and programs to serve those dealing with these diagnoses. – Other Health Provider

The stigma still around it in our community and knowing where to go to get appropriate help. It's just to the point where men in our community haven't even started to have conversations about counseling. Even with counseling, there tends to be a cultural barrier between us and the therapists, which often don't look like us. Adam Thomason writes beautifully about this is his book My Journey with Jesus and Jay-Z. – Community Leader

Stigma. – Community Leader

We all have some degree of mental health issue to deal with. Those who don't think so are just better at hiding it from themselves and/or others. – Community Leader

Stigma of these issues seems to continue to exist. Lack of beds for hospitalizations. – Other Health Provider

Affordable Care/Services

Access to affordable help and alternative medicine options (not just medication). – Other Health Provider

Lack of access to affordable services, lack of insurance coverage or copays/deductibles too high. – Social Services Provider

Obtaining appropriate assistance at an affordable cost along the continuum of mental health issues. It seems as though someone has to be homicidal or suicidal to receive assistance. – Other Health Provider

Lack of appropriate and/or affordable resources. – Other Health Provider

Due to COVID-19

The Covid pandemic has exacerbated challenges for those with mental health issues, spotlighting lack of mental health services providers, cost of mental health services, waiting lists for treatment. – Social Services Provider

With everyone having experienced prolonged stress during the pandemic, it's difficult to identify when it's the right time to reach out for help. It's my feeling that there's many more people struggling now and many of them for the first time in their lives, thus they aren't aware of resources available to them. I think our community needs additional options for treating people experiencing a mental health crisis. – Social Services Provider

Behavioral health is a growing issue and COVID enhanced it. – Community Leader

Many people experienced or had an exacerbation of mental health problems (e.g., anxiety, depression) especially related to COVID. There are increased numbers in the ER a well as the mental health unit at Augusta Health, and many don't have a place to go for treatment due to lack of staff at long-term mental health facilities and are not compliant with taking medication long-term to treat their mental health conditions. – Other Health Provider

Disease Management

Compliance with medications and ease of getting an appointment. – Other Health Provider

Medicine management. Support systems. – Social Services Provider
Awareness/Education

- Education, resources and knowledge, help. – Other Health Provider
  How to identify individuals needing care and then finding resources to help them. The mental health field seems to be underpaid and overworked. – Community Leader

Prevalence/Incidence

- High incidence and limited services. – Physician
  Everyone knows someone who is suffering from or has suffered from mental illness. Mental illness often goes undiagnosed and untreated and there is much stigma around this very common issue. – Community Leader

Eating Disorders

- Eating Disorders – Just know too many families that are impacted. And it's one that remains well-hidden. Generally, the children (and adults) impacted are functioning normally and high achievers and even admired for their physiques. Until it's a problem. Ties into mental health issues, but a bit more specific and overlooked, I think, when folks think of ‘mental health’. – Other Health Provider

Housing

- Housing and employment, which in turn can lead to criminal activity. – Social Services Provider

Impact on Quality of Life

- Mental health affects everything we do. It affects our family relationships, our ability to be productive members of society, our ability to be good parents. – Other Health Provider
DEATH, DISEASE & CHRONIC CONDITIONS
LEADING CAUSES OF DEATH

Distribution of Deaths by Cause

Together, heart disease and cancers accounted for 4 in 10 of all deaths in the Total Area in 2020.

Age-Adjusted Death Rates for Selected Causes

**AGE-ADJUSTED DEATH RATES**

In order to compare mortality in the region with other localities (in this case, Virginia and the United States), it is necessary to look at rates of death — these are figures which represent the number of deaths in relation to the population size (such as deaths per 100,000 population, as is used here).

Furthermore, in order to compare localities without undue bias toward younger or older populations, the common convention is to adjust the data to some common baseline age distribution. Use of these “age-adjusted” rates provides the most valuable means of gauging mortality against benchmark data, as well as Healthy People 2030 objectives.

Note that deaths are coded using the Tenth Revision of the International Statistical Classification of Diseases and Related Health Problems (ICD-10). Rates are per 100,000 population, age-adjusted to the 2000 US Standard Population.
The following chart outlines 2018-2020 annual average age-adjusted death rates per 100,000 population for selected causes of death in the Total Area.

Each of these is discussed in greater detail in subsequent sections of this report.

CARDIOVASCULAR DISEASE

ABOUT HEART DISEASE & STROKE

Heart disease is the leading cause of death in the United States, and stroke is the fifth leading cause. …Heart disease and stroke can result in poor quality of life, disability, and death. Though both diseases are common, they can often be prevented by controlling risk factors like high blood pressure and high cholesterol through treatment.

In addition, making sure people who experience a cardiovascular emergency — like stroke, heart attack, or cardiac arrest — get timely recommended treatment can reduce their risk for long-term disability and death. Teaching people to recognize symptoms is key to helping more people get the treatment they need.

— Healthy People 2030 (https://health.gov/healthypeople)

Age-Adjusted Heart Disease & Stroke Deaths

Heart Disease Deaths

Between 2018 and 2020, there was an annual average age-adjusted heart disease mortality rate of 164.0 deaths per 100,000 population in the Total Area.

BENCHMARK ➤ Fails to satisfy the Healthy People 2030 objective.

DISPARITY ➤ Lower in Augusta County.

Heart Disease: Age-Adjusted Mortality

Notes:
- Asked of all respondents.
Total Cardiovascular Risk

Total cardiovascular risk reflects the individual-level risk factors which put a person at increased risk for cardiovascular disease, including:

- High Blood Pressure
- High Blood Cholesterol
- Cigarette Smoking
- Physical Inactivity
- Overweight/Obesity

Modifying these behaviors and adhering to treatment for high blood pressure and cholesterol are critical both for preventing and for controlling cardiovascular disease.

A total of 88.4% of Total Area adults report one or more cardiovascular risk factors, such as being overweight, smoking cigarettes, being physically inactive, or having high blood pressure or cholesterol.

**BENCHMARK ➤** Higher than the national percentage.

**DISPARITY ➤** More often reported among adults age 65+ (when compared to young adults) and lower-income respondents.

PRC Online Key Informant Survey, PRC, Inc.

**Notes:**
Asked of all respondents.

Among those rating this issue as a “major problem,” reasons related to the following:

**Prevalence/Incidence**

- It is a national issue. – Other Health Provider
- Widespread incidence. – Community Leader
- Prevalence and increased strain on overall health and well-being. – Other Health Provider
- Large number of hospital procedures and the need for a dedicated heart and vascular center. – Other Health Provider
- They are major causes of death and disability. – Community Leader
- Experientially, I had a stroke on September 7, 2019, in my early 40s. Thankfully, no permanent damage, but still super scary. – Community Leader
- High incidence of heart disease, lifestyle issues. – Physician
- Numbers are rising due to unhealthy eating and lack of exercise. – Community Leader
Heart disease is a leading cause of death in our area. The ACSO carries AEDs in all of patrol vehicles. In a
county this size where minutes count, additional resources are needed. – Community Leader
It's the leading cause of death in the United States and is fairly high in our community, as well. Our community
average is higher than the state average, which is alarming. – Social Services Provider
High prevalence of disease. High prevalence of metabolic dysfunction in the population, which is the gateway to
heart disease and stroke. – Other Health Provider
I believe these are major problems in our community because I believe I saw that heart disease is the number
one cause of death in America. – Social Services Provider
Volume of emergent cardiac cases that come through Augusta Health Emergency Room. Wait time for
scheduling appointments with cardiologists. – Other Health Provider
Open-heart surgery. – Physician
Prevalence of heart disease in the community and impact on quality of life. – Public Health Representative
Volumes at the hospital; number of people I personally know with heart disease, high blood pressure or high
cholesterol. Some of these are educated patients who are doing what's required, but family history is pervasive.
– Other Health Provider
I see it and hear about it in the community. Hear about it from church community. – Community Leader

Contributing Factors

The disease in general is prevalent and is the number-one cause of death in most communities. Our community
is not well educated on the benefits of fresh fruits and vegetables, cutting out processed foods and soda. Some
of it is a matter of cost and convenience – unhealthy food is usually cheaper and quicker to get – Physician
An aging population, a remarkably stressful last two years, and an overall lack of healthy lifestyles. Trauma. –
Social Services Provider
The over-65 population is expected to grow from 20% to 25% over the next five years. In addition, poor nutrition
will increase the risk of CV disease. – Other Health Provider
High incidence of DM. Likely related to decreased physical activity. Likely related to overconsumption of high
fat/calorie/sodium foods. – Other Health Provider
Based upon what I understand about rural regions in general, I observe lack of proper diets, lack of exercise and
lack of awareness on proper nutrition that would help with these issues. Furthermore, without proof, I suspect
that many individuals are unaware of the issue until a physical malady becomes acutely obvious. – Community
Leader
A high percentage of the population is sedentary, overweight, or obese, and/or consume a high fat/high
sugar/high salt "Western" diet that puts them at risk for heart disease and stroke. – Other Health Provider
Specifically related to the risk factors that lead to heart disease and stroke, I believe that this community does not
have easy and affordable access to healthy foods and gyms necessary to help prevent these conditions. I also
believe there is a lack of health literacy within the community to help individuals understand what are and are not
high-risk health behaviors (such as smoking, diet, exercise, etc.). – Social Services Provider
Lack of education on when to seek care and/or inability to access needed care. High rates of diabetes, which are
linked to heart disease and stroke. The local diet is very poor, as well. – Other Health Provider
Low socioeconomic levels. Limited access to healthcare. Older population. Lack of knowledge. Lack of low-cost
wellness programs. – Social Services Provider

Obesity

This is a nationwide problem. Obesity is driving increase. – Community Leader
Obesity and aging contribute to heart disease. – Social Services Provider
Obesity. – Social Services Provider
The prevalence of obesity and diets high in fat and cholesterol, as well as poor fitness levels. – Social Services
Provider
Obesity, immobility. – Other Health Provider

Co-Occurrences

It’s a major problem everywhere and definitely in our area where there is a high level of obesity and hypertension
and comorbidities such as heart disease. – Other Health Provider
There are typically severe problems in any community and with our community, rampant with undiagnosed
diabetes and morbid obesity. – Physician
Overweight, lack of activity and diabetes. – Other Health Provider
Diabetes, obesity, health equity issues. – Community Leader
Heart disease and stroke are linked to obesity. We have a huge problem with obesity in our community. – Other
Health Provider
Stress
They are problems in most communities. Stress is prevalent everywhere. Heart-healthy foods are usually far more expensive. – Community Leader
Average Americans, including in our community, are dealing with consequences of stress, unhealthy diets, and inactivity. – Social Services Provider

Lifestyle
Heart disease and stroke are lifestyle diseases with a hereditary component. These can mostly be prevented with education to a willing population. Many people are unaware of the risks until they are diagnosed with cardiac problems or have a stroke. – Other Health Provider
The lifestyle of residents in our community is not healthy from the perspective of diet and exercise, and cardiovascular disease is often a generational issue. – Public Health Representative

Prevention/Screenings
Many people visit the ED with heart disease in late stages. Not enough free screenings for heart disease for the community. – Other Health Provider

Education
Heart disease and strokes are not necessarily a major problem, in that I do not know if the Hispanic population shows higher rates that other local population – but the lack of preventative medicine, education, and care are issues that need to be resolved. For example, few people would know to recognize the telltale signs of a stroke or heart attack, whether pain in the left arm or drooping on one side of the face. – Social Services Provider

Follow-Up/Support
AH provides great care once the stroke or heart disease occurs, but there are minimal services to support them after the fact, as well as minimal resources in prevention. – Other Health Provider
CANCER

ABOUT CANCER

Cancer is the second leading cause of death in the United States. … The cancer death rate has declined in recent decades, but over 600,000 people still die from cancer each year in the United States. Death rates are higher for some cancers and in some racial/ethnic minority groups. These disparities are often linked to social determinants of health, including education, economic status, and access to health care.

Interventions to promote evidence-based cancer screenings — such as screenings for lung, breast, cervical, and colorectal cancer — can help reduce cancer deaths. Other effective prevention strategies include programs that increase HPV vaccine use, prevent tobacco use and promote quitting, and promote healthy eating and physical activity. In addition, effective targeted therapies and personalized treatment are key to helping people with cancer live longer.

– Healthy People 2030 (https://health.gov/healthypeople)

Age-Adjusted Cancer Deaths

All Cancer Deaths

Between 2018 and 2020, there was an annual average age-adjusted cancer mortality rate of 156.2 deaths per 100,000 population in the Total Area.

BENCHMARK ► Fails to satisfy the Healthy People 2030 objective.

TREND ► Trending significantly lower within the service area over time.

DISPARITY ► Lower in Augusta County.

Cancer Incidence

"Incidence rate" or "case rate" is the number of newly diagnosed cases in a given population in a given year, regardless of outcome. These rates are also age-adjusted. It is usually expressed as cases per 100,000 population per year.

The highest cancer incidence rates are for female breast cancer and prostate cancer.

**BENCHMARK**

Colorectal Cancer ➤ Higher than both state and national rates.

Sources: State Cancer Profiles; Center for Applied Research and Engagement Systems (CARES), University of Missouri Extension. Retrieved April 2022 via SparkMap (sparkmap.org).

Notes: This indicator reports the age-adjusted incidence rate (cases per 100,000 population per year) of cancers, adjusted to 2000 US standard population age groups (under age 1, 1-4, 5-9, ... 80-84, 85 and older). This indicator is relevant because cancer is a leading cause of death and it is important to identify cancers separately to better target interventions.

Prevalence of Cancer

A total of 12.7% of surveyed Total Area adults report having ever been diagnosed with cancer. The most common types include skin cancer, breast cancer, and prostate cancer.

**DISPARITY** ➤ Especially high among seniors (age 65+).
Prevalence of Cancer

The most common types of cancers cited locally include:
1) Skin Cancer 22.7%
2) Breast Cancer 21.6%
3) Prostate Cancer 14.7%

Notes: Reflects all respondents.

ABOUT CANCER RISK

Reducing the nation’s cancer burden requires reducing the prevalence of behavioral and environmental factors that increase cancer risk.

- All cancers caused by cigarette smoking could be prevented. At least one-third of cancer deaths that occur in the United States are due to cigarette smoking.
- According to the American Cancer Society, about one-third of cancer deaths that occur in the United States each year are due to nutrition and physical activity factors, including obesity.
  - National Center for Chronic Disease Prevention and Health Promotion, Centers for Disease Control and Prevention
Cancer Screenings

The American Cancer Society recommends that both men and women get a cancer-related checkup during a regular doctor’s checkup. It should include examination for cancers of the thyroid, testicles, ovaries, lymph nodes, oral cavity, and skin, as well as health counseling about tobacco, sun exposure, diet and nutrition, risk factors, sexual practices, and environmental and occupational exposures.

Screening levels in the community were measured in the PRC Community Health Survey relative to three cancer sites: female breast cancer (mammography); cervical cancer (Pap smear/HPV testing); and colorectal cancer (colonoscopy/sigmoidoscopy and fecal occult blood testing).

FEMALE BREAST CANCER
The US Preventive Services Task Force (USPSTF) recommends biennial screening mammography for women aged 50 to 74 years.

CERVICAL CANCER
The US Preventive Services Task Force (USPSTF) recommends screening for cervical cancer every 3 years with cervical cytology alone in women aged 21 to 29 years. For women aged 30 to 65 years, the USPSTF recommends screening every 3 years with cervical cytology alone, every 5 years with high-risk human papillomavirus (hrHPV) testing alone, or every 5 years with hrHPV testing in combination with cytology (cotesting). The USPSTF recommends against screening for cervical cancer in women who have had a hysterectomy with removal of the cervix and do not have a history of a high-grade precancerous lesion (i.e., cervical intraepithelial neoplasia [CIN] grade 2 or 3) or cervical cancer.

COLORECTAL CANCER
The US Preventive Services Task Force (USPSTF) recommends screening for colorectal cancer starting at age 50 years and continuing until age 75 years.

“Appropriate cervical cancer screening” includes Pap smear testing (cervical cytology) every three years in women age 21 to 29 and Pap smear testing and/or HPV testing every 5 years in women age 30 to 65.

“Appropriate colorectal cancer screening” includes a lower endoscopy (sigmoidoscopy or colonoscopy) within the past 10 years.

Among women age 50-74, 76.7% have had a mammogram within the past 2 years.

Among Total Area women age 21 to 65, 76.0% have had appropriate cervical cancer screening.

- **BENCHMARK** ➤ Fails to satisfy the Healthy People 2030 objective.
- **DISPARITY** ➤ Lower in Staunton (not shown).

Among all adults age 50-75, 80.8% have had appropriate colorectal cancer screening – in this case, sigmoidoscopy or colonoscopy.

- **BENCHMARK** ➤ More favorable than the statewide percentage. Satisfies the Healthy People 2030 objective.
- **DISPARITY** ➤ Lower in Augusta County (not shown).
**Breast Cancer Screening**
(Women Age 50-74)
Healthy People 2030 = 77.1% or Higher

Key Informant Input: Cancer

The greatest share of key informants taking part in an online survey characterized Cancer as a “moderate problem” in the community.

Perceptions of Cancer as a Problem in the Community (Key Informants, 2022)

- Major Problem: 17.8%
- Moderate Problem: 61.1%
- Minor Problem: 14.0%
- No Problem At All: 7.0%

Sources: PRC Online Key Informant Survey, PRC, Inc.
Notes: Asked of all respondents.

Among those rating this issue as a “major problem,” reasons related to the following:

Prevalence/Incidence

There are so many individuals in every community that have been affected by cancer. Cancer is nondiscriminatory and too many lives have been lost, including children. – Social Services Provider

Seems the number of deaths and individuals diagnosed with cancer in my organization has increased. – Community Leader

Cancer is a major problem due to the amount of people that are diagnosed and/or die from it annually. It affects everyone in our community; everyone knows someone or is related to someone who has/had cancer. – Community Leader

The numbers who access our services seem to be growing. New diagnosis in children in this area also seems to be on the rise. These patients utilize many resources in order to meet their needs medically as well as psychosocially. – Other Health Provider

 Everywhere you look in this community, someone has cancer. Churchville area seems to be a high-cancer area with a large number of children and adults with cancer. – Other Health Provider

The incidence is not improving, although it is being detected at earlier stages with those patients that have preventive screening. Many patients continue to not participate in preventive screening (especially low-dose CT screening), and advanced lung cancer cases continues to be a problem. There also continue to be a large number of breast cancer patients. – Other Health Provider

There are so many affected. – Other Health Provider

It's a problem across the world, not just in our community. Catching cancer in its early stages is the difference between life and death. Screenings are important and screening education. – Other Health Provider

It seems that there are more people being diagnosed at a younger age and later stage. – Other Health Provider

I hear frequently of various forms of cancers in a wide population. I know of no one unaffected within their families or groups to cancer. – Community Leader

We have a high rate of cancer in our community. – Other Health Provider

Rates of cancer continue to rise each year. People are becoming more secluded to office space, home space, with the advancement of technology and the pandemic aftermath. – Social Services Provider

There seems to be a disproportionate number of children in the area who are diagnosed with cancer. – Social Services Provider

It is my understanding that this is a problem that affects all parts of our world presently. Therefore, because it consistently is a concern, I listed it as a major problem. – Social Services Provider

The amount of cases in our youth in the area. – Community Leader

I believe cancer is a major problem because so many people, at one point or another, are diagnosed with some form of cancer, many of which are fatal. – Social Services Provider

So many people have been diagnosed recently. – Community Leader

Pediatric cancer specifically has touched many lives in our community, and there is a lack of research and funding around this. – Community Leader
The number of people in my immediate circle of family and friends with or having fought cancer is the predominant health issue. – Community Leader

I hear about cancer as a diagnosis for many of my friends and acquaintances, especially those over 60. My husband has recently been diagnosed with cancer, and I have become familiar with the Cancer Center and how many individuals receive treatment there. – Community Leader

In many of the communities that we serve, cancer is in the top three medical issues that we hear about. – Social Services Provider

There is a huge amount of cancer in our community, specifically in children. – Community Leader

**Diagnosis/Treatment**

Late-stage diagnosis. However, I do feel AH has done a great job of promoting the benefit of early diagnosis through cancer screening and cancer prevention. However, there always seems to be community members/communities that do not take advantage of cancer screening available to them either through insurance, or free/reduced screenings that may be available to them, based on income. This especially rings true (in nearly every community nationwide) due to the pandemic and public health concerns. Again, this is all based on my professional responsibilities as a partner with AH in the cancer space. – Social Services Provider

One reason is people only visit the doctor when death feels eminent. In these cases, something that could have been curable is now a death sentence. I’ve seen on two occasions men in their 50s in my old neighborhood diagnosed and then dead weeks later. – Community Leader

**Contributing Factors**

The Cancer Center is yet again in shambles, and provider turnover is a severe issue. Also, patients are not being appropriately screened for a multitude of reasons, including lack of follow up by the patient. – Physician

It seems that more and more people are being diagnosed with some form of cancer every day. Our diets and habits are contributing factors. – Community Leader

**Affordable Care/Services**

Costs of treatment are very high and an obstacle to early detection. – Social Services Provider

**Co-Occurrences**

Poor metabolic health increasing risk of cancers related to metabolic dysfunction. – Other Health Provider

**Lack of Providers**

We have had considerable turnover in our oncologists for Augusta. Good cancer care (similar to good care in general) relies not only on excellence but also consistent and ongoing care from the same provider. Trust in the system is hard to overemphasize. – Physician
RESPIRATORY DISEASE

ABOUT RESPIRATORY DISEASE

Respiratory diseases affect millions of people in the United States. ...More than 25 million people in the United States have asthma. Strategies to reduce environmental triggers and make sure people get the right medications can help prevent hospital visits for asthma. In addition, more than 16 million people in the United States have COPD (chronic obstructive pulmonary disease), which is a major cause of death. Strategies to prevent the disease — like reducing air pollution and helping people quit smoking — are key to reducing deaths from COPD.

Interventions tailored to at-risk groups can also help prevent and treat other respiratory diseases — for example, pneumonia in older adults and pneumoconiosis in coal miners. And increasing lung cancer screening rates can help reduce deaths from lung cancer through early detection and treatment.

— Healthy People 2030 (https://health.gov/healthypeople)

Age-Adjusted Respiratory Disease Deaths

Chronic Lower Respiratory Disease Deaths (CLRD)

Between 2018 and 2020, there was an annual average age-adjusted CLRD mortality rate of 47.8 deaths per 100,000 population in the Total Area.

BENCHMARK ➤ Higher than found across the state and nation.

DISPARITY ➤ Lower in Augusta County.

ABOUT INFLUENZA & PNEUMONIA

Influenza (flu) is a contagious respiratory illness caused by influenza viruses. It can cause mild to severe illness. Serious outcomes of flu infection can result in hospitalization or death. Some people, such as older people, young children, and people with certain health conditions, are at high risk of serious flu complications. There are two main types of influenza (flu) virus: Types A and B. The influenza A and B viruses that routinely spread in people (human influenza viruses) are responsible for seasonal flu epidemics each year. The best way to prevent flu is by getting vaccinated each year.

Pneumonia is an infection of the lungs that can cause mild to severe illness in people of all ages. Depending on the cause, doctors often treat pneumonia with medicine. In addition, vaccines can prevent some types of pneumonia. However, it is still the leading infectious cause of death in children younger than 5 years old worldwide. Common signs of pneumonia include cough, fever, and difficulty breathing. You can help prevent pneumonia and other respiratory infections by following good hygiene practices. These practices include washing your hands regularly and disinfecting frequently touched surfaces. Making healthy choices, like quitting smoking and managing ongoing medical conditions, can also help prevent pneumonia.

Vaccines help prevent pneumococcal disease, which is any type of illness caused by Streptococcus pneumoniae bacteria.

More than three-fourths of Total Area adults (78.5%) report being vaccinated against Coronavirus Disease/COVID-19.

### Prevalence of COVID-19 Vaccination

(Total Area, 2022)

Among unvaccinated respondents, the main reasons given included:

- Safety/trust (40.9%)
- No need/don’t want (27.7%)
- Personal beliefs (15.4%)
- Doesn’t Work (5.3%)
- Already had COVID (4.7%)
- Other health reasons (2.2%)
- Uncertain (2.2%)
- Unavailable (0.5%)
- Lack of transportation (0.4%)

Among vaccinated respondents, 69.8% have received a booster.

- Vaccinated
- Plan to Get Vaccinated
- Don’t Plan to Get Vaccinated
- Haven’t Decided

Sources: 2021 PRC Community Health Survey, PRC, Inc. [Items 318–320]

Notes:

- Asked of all respondents.
- Vaccinated respondents further were asked whether they had received a booster in addition to their original COVID-19 vaccine. This was defined as a third shot following a Pfizer or Moderna vaccine series, or a second shot following a Johnson & Johnson vaccine.
Surveyed adults reported a change in certain health-related behaviors and activities since the pandemic began in March 2020:

**EXERCISE ►** 27.0% are exercising less often.

**TOBACCO USE ►** 26.8% are smoking or vaping more often.

**DIETARY HABITS ►** 24.3% are eating unhealthy foods or overeating more often.

**ALCOHOL USE ►** 14.1% are drinking alcohol more often.

<td>5.4%</td>
</tr>
</tbody>
</table>

Sources: PRC Online Key Informant Survey, PRC, Inc.
Notes: Asked of all respondents.

Among those rating this issue as a “major problem,” reasons related to the following:

Tobacco Use
- Primarily driven by tobacco use in adults and poorly addressed asthma in children. – Community Leader
- It's still an area with lots of smokers. – Other Health Provider
- Large number of population that smokes leads to respiratory disease as well as the issues caused by secondhand smoke. The vaping trend brings more issues that we don't know about yet. – Community Leader
- We have COPD patients often related to long-term use of tobacco products. This leads to frequent ED visits/hospitalizations. – Other Health Provider
- Significant smoking and pollutants in the area due to factory work. – Physician

Prevalence/Incidence
- A significant number of individuals are burdened by chronic lung conditions such as COPD, which are preventable. Activities like "vaping" are becoming more prevalent amongst young people and an increasing number of stores are opening that sell a variety of these products. – Social Services Provider
- As people age and due to chronic conditions and environmental factors such as smoking, respiratory disease is prevalent. – Community Leader
- Number of individuals with COPD, asthma, Coronavirus lingering respiratory issues, smoking, and vaping. – Community Leader

Contributing Factors
- Younger folks who are obese end up being older folks with respiratory problems. Smoking seems to be quite popular with our population, as well. – Community Leader
- High prevalence of COPD and asthma. High cost of medications, especially inhalers. – Other Health Provider
- Access and education. – Social Services Provider
Key Informant Input: Coronavirus Disease/COVID-19

Key informants taking part in an online survey were more likely to characterize Coronavirus Disease/COVID-19 as a “moderate problem” in the community.

Perceptions of Coronavirus Disease/COVID-19 as a Problem in the Community
(Key Informants, 2022)

- Major Problem: 19.5%
- Moderate Problem: 50.6%
- Minor Problem: 22.0%
- No Problem At All: 7.9%

Sources: PRC Online Key Informant Survey, PRC, Inc.
Notes: Asked of all respondents.

Among those rating this issue as a “major problem,” reasons related to the following:

**Vaccination Rate**
- Number of people still unvaccinated. – Other Health Provider
- Low vaccination rates among sub-communities and older population overall. – Social Services Provider
- The percentage of fully vaccinated in the SAW is about 8 percentage points less than the state, and in turn, the number of people who have had COVID-19 is 24% in the SAW compared to 19% in the state. We now know that the more fully vaccinated people there are, the fewer patients contract the disease. The SAW is behind in accepting COVID-19 vaccination, and this continues to leave the community more vulnerable than other places in the state. Given Augusta Health is the primary provider for the majority of patients in the SAW, patients with COVID-19 impose a significant burden on Augusta Health’s role as the primary provider of acute care services for patients who live within a 30-mile radius. – Other Health Provider
- Vaccination status remains lower and transmission rates were trending higher in this area. – Social Services Provider
- So many in our community are resistant to vaccination, which puts those most vulnerable in the community at risk for severe disease. – Other Health Provider
- Low vaccination rates, hospitalization rates, and deaths. – Other Health Provider
- Poor vaccination rate, subsequent healthcare staff burnout, and it has taken away resources for other illnesses. – Physician
- Lack of vaccination. Vaccines are available, but many of the population do not want to be vaccinated. – Social Services Provider
- There is a large unvaccinated population and a large group who did not believe in wearing masks. This led to high surges in the community. – Other Health Provider
- Much of population is not vaccinated. – Community Leader

**Contributing Factors**
- Multiple surges led to significant morbidity and mortality. Many people with post-COVID/long COVID symptoms that have not been addressed. There were ample opportunities for vaccination; however, there is a portion of the population that has comorbidities or older in age that have not accepted vaccination as a tool to prevent hospitalization and death. – Physician
- The impacts are deep and wide, even with the decrease in severity currently. The underlying issues around communication and community trust are profound. – Social Services Provider
- Lack of vaccine compliance. Surges create hospital bed capacity concerns and reduction of hospital services. – Other Health Provider
- Poor vaccination rate and lack of education on the real impact of illness. – Other Health Provider
The vaccination rates are still relatively low, and mask compliance is minimal. There seems to be a significant number of patients coming into clinics with "COVID like" symptoms that refuse testing because they "don't think it's COVID" or they don't want it to impact their ability to go to work. Patients in the area often seem concerned about how it will impact their job and are also frustrated with the "healthcare system making such a big deal about COVID." The misinformation that patients have and the limitations companies provide on their workers contributes to the lack of control of COVID in the community and negatively impacts the community. If workers fear not getting paid for being out for COVID testing, they are less likely to want to get tested for COVID. Some companies are also still requiring repetitive PCR testing for workers who have tested positive for COVID and are beyond the quarantine restrictions requiring extra time off and extra cost to patients and HC. – Social Services Provider

The effects of COVID-19 are still very much prevalent, affecting the costs of many essential items and leading to financial strains. Individuals are still contracting this virus, and there is still a lack of confidence in the vaccine. – Social Services Provider

Lower vaccination and booster rates, lower pediatric vaccination rates, significant impact on the health care system, increase in mental health issues, impacts to the schools and education, health equity issues. – Community Leader

Testing capacity was insufficient to meet demands during surge periods; wait times at urgent care centers often exceeded three hours. There is poor acceptance of basic public health measures, like mask wearing, quarantine, and avoiding large social gatherings during periods of high community transmission. Employers could do more to promote vaccination among their staff, like providing incentives, time off, etc. – Public Health Representative

Prevalence/Incidence

I know of a lot of people who have had COVID-19. I helped sponsor two community vaccine events with poor turnout. I know of many friends and family that will not get vaccinated. – Public Health Representative

I feel this continues to be a major problem. Individuals are exhausted, and many have been left with mental health issues as a result of COVID-19. – Social Services Provider

I am happy to see that there is a decline in the numbers in our area. However, because it still very obviously a continued health issue, I feel it’s important to list as it will be something we are projected to be dealing with for the long term through different variants. – Social Services Provider

Number of hospitalizations. AH had to designate COVID-19 units. Rate of infection was over 70% a couple of weeks ago. Is now moderate, but another variant is on the way. – Social Services Provider

Impact on Overall Health

As a mental health professional, this is less about the disease itself and more about the ways that this pandemic as a whole has negatively impacted the mental health and wellness of our community members. There is already data, and reports that suggest that "recovery" from this pandemic will be a long process that will require an abundance of available supports for our community members. – Community Leader

The effects of the pandemic have been waning, but this impacted all aspects of life – including access to routine health care, mental health, substance use, domestic violence, work/school, etc. Communities are going to be recovering from the pandemic for a long period of time, and likewise, need to take time to reflect on the successes and failures of response in order to be better prepared for the future. – Community Leader

The COVID-19 pandemic not only endangered the physical health of our community but also created isolation, stress, anxiety, fear, conflict, financial strains, etc., all of which have negatively impacted the mental health of many. We know substance use is up, family units are at risk, businesses have been lost, a sense of trust in leaders and experts is lost with many. This is more than a major problem, it's a crisis. – Community Leader

Vulnerable Population

The COVID-19 outbreak has impacted our local community and is particularly detrimental to members of those social groups in the most vulnerable situations: impoverished, disabled, elderly, families with young and school-age children. Sustainable and affordable housing is a real issue, as inventory and competition issues impact. Childcare affordability and access have challenged young working families. COVID continues to affect older persons and disabled physically, yes, but mentally and emotionally, too, since increased isolation, caregiver stress, and reduction in home health aide availability. – Social Services Provider

LGBTQ people are at a higher risk for negative effects of COVID-19 – due to higher rates of smoking, lack of access to health care, and other reasons. The isolation felt by many during the pandemic has also exacerbated mental health struggles for many in our community. – Social Services Provider

Access to Care/Services

Health screenings. Colon cancer screening, for instance, was decreased due to pandemic and shift of staffing resources in hospital, many people on waiting list. HIV PrEP screening underutilized in community. – Physician

Limits availability of healthcare providers. Increase demands on inpatient healthcare team. Increase stress to community members. – Other Health Provider
Awareness/Education

We seem to have been unable to convince enough of the population of the importance of vaccinations and other measures. The politics of this area worked against this. – Social Services Provider

Isolation

Isolation, believe this leads to a number of other health-related issues. – Social Services Provider

Co-Occurences

Has led to an increase in behavioral health issues in our community. – Other Health Provider
INJURY & VIOLENCE

ABOUT INJURY & VIOLENCE

INJURY ► In the United States, unintentional injuries are the leading cause of death in children, adolescents, and adults younger than 45 years. …Many unintentional injuries are caused by motor vehicle crashes and falls, and many intentional injuries involve gun violence and physical assaults. Interventions to prevent different types of injuries are key to keeping people safe in their homes, workplaces, and communities.

Drug overdoses are now the leading cause of injury deaths in the United States, and most overdoses involve opioids. Interventions to change health care providers’ prescribing behaviors, distribute naloxone to reverse overdoses, and provide medications for addiction treatment for people with opioid use disorder can help reduce overdose deaths involving opioids.

VIOLENCE ► Almost 20,000 people die from homicide every year in the United States, and many more people are injured by violence. …Many people in the United States experience physical assaults, sexual violence, and gun-related injuries. Adolescents are especially at risk for experiencing violence. Interventions to reduce violence are needed to keep people safe in their homes, schools, workplaces, and communities.

Children who experience violence are at risk for long-term physical, behavioral, and mental health problems. Strategies to protect children from violence can help improve their health and well-being later in life.

– Healthy People 2030 (https://health.gov/healthypeople)

Unintentional Injury

Age-Adjusted Unintentional Injury Deaths

Between 2018 and 2020, there was an annual average age-adjusted unintentional injury mortality rate of 50.3 deaths per 100,000 population in the Total Area.
Unintentional Injuries: Age-Adjusted Mortality
(2018-2020 Annual Average Deaths per 100,000 Population)

Violent Crime

Violent Crime Rates

In 2016, there were a reported 138.6 violent crimes per 100,000 population in the Total Area.

**BENCHMARK** ► Considerably lower than state and national rates.

**DISPARITY** ► Lower in Augusta County.

Respondents were read: “By an intimate partner, I mean any current or former spouse, boyfriend, or girlfriend. Someone you were dating, or romantically or sexually intimate with would also be considered an intimate partner.”

Family Violence

A total of 15.1% of Total Area adults acknowledge that they have ever been hit, slapped, pushed, kicked, or otherwise hurt by an intimate partner.

**TREND** ► Significantly higher than the 2016 benchmark.
Have Ever Been Hit, Slapped, Pushed, Kicked, or Hurt in Any Way by an Intimate Partner

Total Area

Key Informant Input: Injury & Violence

Key informants taking part in an online survey generally characterized Injury & Violence as a “moderate problem” in the community.

Perceptions of Injury and Violence as a Problem in the Community (Key Informants, 2022)

- Major Problem
- Moderate Problem
- Minor Problem
- No Problem At All

Among those rating this issue as a “major problem,” reasons related to the following:

Prevalence/Incidence

Anecdotally, we hear of more gun violence, domestic and child abuse and crime in our area. – Community Leader

The number of court cases in JDR courts is astounding. It’s not just here, it’s everywhere. Intimate partner violence is serious. – Social Services Provider

Too many women and children are subjected to domestic violence, which impacts their ability to fully participate in our community. – Community Leader

Due to COVID-19

Physical, psychological, and mental abuse have been on the rise since the COVID-19 pandemic started. This leads to childhood trauma, which has lasting physical and mental effects throughout a person’s lifetime. – Social Services Provider
We have seen an uptick in our services due to COVID-specific domestic violence and child abuse, where individuals have sustained a traumatic brain injury. – Social Services Provider

**Prevention**

Injury and violence prevention. These have greater impact on younger people, can cause disability, can cause psychological trauma, and are associated with drug and alcohol abuse, as well as poverty. – Public Health Representative

**Contributing Factors**

Combination of lots of guns with high level of mental health/substance abuse in the community. Not a good combination. – Other Health Provider

**Gun Violence**

Even in a small town like Staunton, I've been to funerals for several young Black men killed by gun violence. – Community Leader
DIABETES

ABOUT DIABETES

More than 30 million people in the United States have diabetes, and it’s the seventh leading cause of death. …Some racial/ethnic minorities are more likely to have diabetes. And many people with diabetes don’t know they have it.

Poorly controlled or untreated diabetes can lead to leg or foot amputations, vision loss, and kidney damage. But interventions to help people manage diabetes can help reduce the risk of complications. In addition, strategies to help people who don’t have diabetes eat healthier, get physical activity, and lose weight can help prevent new cases.

– Healthy People 2030 (https://health.gov/healthypeople)

Age-Adjusted Diabetes Deaths

Between 2018 and 2020, there was an annual average age-adjusted diabetes mortality rate of 23.6 deaths per 100,000 population in the Total Area.

TREND ► Denotes a significant increase from the baseline.

DISPARITY ► Lower in Augusta County.

Diabetes: Age-Adjusted Mortality
(2018-2020 Annual Average Deaths per 100,000 Population)

Staunton City: 30.5
Waynesboro City: 32.7
Augusta County: 18.7
Total Area: 23.6
VA: 23.5
US: 22.6

Diabetes: Age-Adjusted Mortality Trends
(Annual Average Deaths per 100,000 Population)

Sources: CDC WONDER Online Query System, Centers for Disease Control and Prevention, Epidemiology Program Office, Division of Public Health Surveillance and Informatics. Data extracted April 2022.

Prevalence of Diabetes

A total of 14.9% of Total Area adults report having been diagnosed with diabetes.

TREND ► Less favorable than the statewide percentage.

DISPARITY ► More often reported among adults age 40+.

Prevalence of Diabetes

89.0% are taking action to control their diabetes
Key Informant Input: Diabetes

The greatest share of key informants taking part in an online survey characterized Diabetes as a “major problem” in the community.

Perceptions of Diabetes as a Problem in the Community
(Key Informants, 2022)

Among those rating this issue as a “major problem,” reasons related to the following:

Contributing Factors

For the people we serve, the biggest challenges are lack of education about diabetes management, cost of insulin and other diabetes medications, and cost of healthy food. — Social Services Provider

Our community as a whole is unhealthy and overweight due to lack of education and affordable nutritional options. Our hectic lives also make it much easier to stop for fast-food options. — Community Leader

Education and medicine. — Other Health Provider

Lack of knowledge, medication compliance/affordability. — Other Health Provider

Diet, education, and access to fresh produce, especially those with food and/or housing insecurities. — Physician

Obesity is often linked with diabetes. Often, diabetic medications (especially the ones that are easy to use, like the insulin pens) are expensive. Lots of people retire to Augusta County and have trouble administering their insulin. — Other Health Provider
Poor diet and lack of diet, as well as being underinsured, contributing to their diabetes being uncontrolled. – Other Health Provider

Diet, access/cost of healthy eating, medications, physician appointments limited, lack of telehealth knowledge with electronics. – Other Health Provider

Access to care, affordable nutritious foods, and affordable exercise and/or physical therapy, especially for residents in the outreaching rural areas of Augusta County. – Public Health Representative

Diet management and compliance, cost of medical resources. – Community Leader

Inability to afford medications and testing supplies, as well as access to healthy foods. – Other Health Provider

Diabetes is an expensive disease that requires a lot of time commitment, discipline, support. Not enough to just go see the doctor and take the medicine, which is often very expensive. Need to have access to healthy food, ability to exercise, psychosocial support from family and friends. Most people with uncontrolled diabetes lacking one or more of these things. – Physician

Limited choices and education for living a healthier lifestyle that is accessible and within their budget. – Social Services Provider

Prevalence and greater strain on overall health and well-being. Access to affordable medications, food, other resources. – Other Health Provider

Access to healthy foods, costs for insulin and other drugs to treat. – Community Leader

I think some of the biggest challenges for people with diabetes in our community is medication access, understanding what resources are available to them to assist with their diagnosis, and being able to afford healthy food alternatives. – Other Health Provider

Nutritional food is expensive. SNAP often isn't enough. Lack of knowledge on how to prepare nutritional meals. Medications that have ridiculous side effects. – Social Services Provider

Lack of access to healthy foods. Lack of education on how to eat healthy. Inactivity. Mental health challenges to "get off the couch." – Social Services Provider

Low health literacy – not fully understanding that diabetes is treatable, and complications may be prevented – this impacts how much education they seek and/or take advantage of – high cost of DM meds. Access to meds – actually getting the meds into the patients’ hands. – Other Health Provider

Ability to afford copays for medications and strips. Ability to understand and navigate their prescription coverage. Picking up refills of medications. Getting in with a provider in a timely manner, although access has improved and the AH Endocrinology clinic has really worked to improve this need and be flexible for patient needs. – Other Health Provider

Access to healthy foods/improvements in physical activity/education and support on healthy lifestyle changes. – Community Leader

Diabetes medications are high-cost, ease of access to unhealthy, low-cost food options (i.e., fast food) that do not support diabetes management. – Other Health Provider

The biggest challenges that people with diabetes in our community face include being unable to access their medications, being unable to afford their medications, and not knowing how to properly manage their diabetes. – Other Health Provider

Lack of knowledge on diet and staying healthy. Lack of interest in exercising and eating well. – Social Services Provider

Referencing type 2 diabetes in particular, folks struggle to shift their lifestyles for a number of reasons. Access to health food and making cooking/preparing this food a norm in their lifestyle is a challenge. Incorporating exercise into daily life can feel like a big ask for folks who are not used to this. The cost of insulin could be a barrier to controlling both type 1 and 2 diabetes. – Social Services Provider

Cost of care, medications and routine follow up treatment. Cost of healthy foods. Limited patient education, including how to prevent or slow disease progression. Widely accepted this is a progressive disease. Lack of resources, including mental health, to address the barriers to lifestyle changes that could improve management of the disease. – Other Health Provider

Not having enough providers to get frequent visits and follow-up. Misinformation. Price of supplies and medications to control well. Supplies not all available in one location. – Other Health Provider

Nutrition

Poor nutrition and lack of physical activity, especially kids. COVID has only made it worse. – Other Health Provider

Lack of good diet and exercise. – Other Health Provider

Nutrition services, exercise. – Physician

A healthy diet and physical activity are so important to people with diabetes. While these are personal choices, they could be supported better if the community offered more healthy food options and active recreational endeavors. – Social Services Provider

Knowing they need to change their diet accordingly, but not having the desire to do it, the know-how to do it, and the means to afford a healthier diet. – Community Leader
Numbers are rising due to unhealthy eating and lack of exercise. – Community Leader

Poor nutritional eating habits. The culture seems to prefer foods which lead to a higher BMI, obesity, and ultimately diabetes. Healthy food options do not seem to be the best sellers and are secondary choices at restaurants and grocery stores. The other challenge is some low-income families tend to avoid more expensive produce and foods. – Other Health Provider

**Disease Management**

Following a treatment plan and compliance. – Other Health Provider

Compliance and monitoring. – Physician

I'm going to call it compliance. I think many know what to do, and their providers have helped direct them or guide the way. But unless you really see it as a major problem impacting your health – and are willing to make the necessary lifestyle changes – you will only fully or partly comply with what you really need to do. I'm not sure if it's denial of the disease, of the impact or the disease or what. But it's probably just as hard to change diet, start exercising, monitor blood sugar, etc., as it is to stop smoking. – Other Health Provider

Maintaining healthy weight and blood glucose control. – Public Health Representative

Their compliance with nutrition and medication prescriptions. – Other Health Provider

Compliance with making life changes and access to affordable medication, healthy food, etc. Some people that I know eat fast food because they are unable to physically cook for themselves. – Other Health Provider

**Lifestyle**

Unwillingness to adjust lifestyle to reduce prevalence of diabetes. Perhaps an educational issue. – Community Leader

Making sustainable lifestyle choices and having the resources to do so. – Community Leader

Making and sustaining the necessary lifestyle changes has been a consistent issue. – Social Services Provider

Balancing lifestyle and diabetes treatment. – Community Leader

Difficulty in easily leading a healthy lifestyle that would minimize the chances of developing type 2 diabetes. – Social Services Provider

**Awareness/Education**

I would guess that a general lack of education exists around diabetes and along with that, a motivation or desire to improve this health condition. – Social Services Provider

Education. – Social Services Provider

Lack of understanding of disease process. Education regarding healthy food options. – Community Leader

Understanding of the different types, education about prevention, treatment, long-term effects. – Community Leader

Education about and support for changing lifestyle to treat and/or manage the disease. – Community Leader

**Access to Affordable Healthy Food**

Access to easy, nutritious food. – Other Health Provider

Access to healthy foods. Lack of nutritional education. Money and time. Healthy foods are far more expensive and time consuming to prepare each night as compared to hitting the McDonald's drive-thru. – Other Health Provider

Access to healthy food and knowing how to prepare it. – Other Health Provider

I believe access to affordable fresh fruits and vegetables (or affordable and convenient healthy options) is the biggest challenge for those with diabetes. – Social Services Provider

**Access to Care/Services**

Access to weight loss programs that have all avenues to help them, including medication providers. – Other Health Provider

Access to primary care, free/low-cost opportunities for year-round physical activity, cost of insulin. – Public Health Representative

Holistic support and care (medication, physical activity, diet, support groups/individual) that helps retain dignity

**Obesity**

I am thinking about type 2 diabetes. Being overweight impacts every body system negatively. Knowledge and motivation to control weight through diet and exercise are challenged by disregard for signs and symptoms of the disease process and/or the mentality that diabetes can be controlled by medication. – Other Health Provider

Morbid obesity and subscribe weight loss, poor eating habits. – Physician

Obesity. Diets. – Community Leader
Affordable Medications/Supplies

- Cost of supplies, availability of resources for support. – Community Leader
- I feel the biggest challenges for people with diabetes in the community is proper and affordable care and treatment, along with education on managing and preventing the disease. – Community Leader
- Paying for medicine. – Community Leader

Income/Poverty

- Low economic levels leading to poor nutritional understanding and habits. High costs of healthy foods and lack of help in understanding needs. – Social Services Provider
- People living in poverty do not have the resources necessary to deal with their diabetes and take the necessary steps to prevent complications. – Other Health Provider

Prevention/Screenings

- Access to prevention-based programs and then the resources to effectively live the strategies out. – Social Services Provider
- Diabetes prevention and diabetes self-management. – Other Health Provider

Access to Care for Uninsured/Underinsured

- Lack of medical insurance, so they are not getting enough instructions on how to manage their diabetes. – Community Leader

Denial/Stigma

- Fear of diagnosis/stigma of diabetes with resistance to visiting health care providers, lack of knowledge and fear of what changes they may be asked to make if/when they seek treatment. Fear of having to take insulin or check blood sugars or give up foods they like to eat. – Other Health Provider

Impact on Quality of Life

- Recognizing that diabetes causes long-term, serious health problems. – Community Leader

Insufficient Physical Activity

- Activity and weight management. – Other Health Provider

Co-Occurrences

- High blood pressure is rampant. I see this with most of my employees and at least 3/4 of my clients. I think it is related to other untreated, underlying diseases, as well as stress and overconsumption of salt, especially cheaper convenience foods. – Social Services Provider
KIDNEY DISEASE

ABOUT KIDNEY DISEASE

More than 1 in 7 adults in the United States may have chronic kidney disease (CKD), with higher rates in low-income and racial/ethnic minority groups. And most people with CKD don’t know they have it. …People with CKD are more likely to have heart disease and stroke — and to die early. Managing risk factors like diabetes and high blood pressure can help prevent or delay CKD. Strategies to make sure more people with CKD are diagnosed early can help people get the treatment they need.

Recommended tests can help identify people with CKD to make sure they get treatments and education that may help prevent or delay kidney failure and end-stage kidney disease (ESKD). In addition, strategies to make sure more people with ESKD get kidney transplants can increase survival rates and improve quality of life.

– Healthy People 2030 (https://health.gov/healthypeople)

Age-Adjusted Kidney Disease Deaths

Between 2018 and 2020, there was an annual average age-adjusted kidney disease mortality rate of 14.0 deaths per 100,000 population in the Total Area.

DISPARITY ► Higher in Staunton.

Kidney Disease: Age-Adjusted Mortality
(2018-2020 Annual Average Deaths per 100,000 Population)

Staunton City 21.0
Waynesboro City N/A
Augusta County 11.5
Total Area 14.0
VA 16.1
US 12.8

Sources: ● CDC WONDER Online Query System. Centers for Disease Control and Prevention, Epidemiology Program Office, Division of Public Health Surveillance and Informatics. Data extracted April 2022.
Kidney Disease: Age-Adjusted Mortality Trends

Key Informant Input: Kidney Disease

Key informants taking part in an online survey generally characterized Kidney Disease as a “moderate problem” in the community.

Perceptions of Kidney Disease as a Problem in the Community (Key Informants, 2022)

- Major Problem
- Moderate Problem
- Minor Problem
- No Problem At All

4.2% 52.1% 35.2% 8.5%

Among those rating this issue as a “major problem,” reasons related to the following:

Prevalence/Incidence

- Reports from community members. – Community Leader
  Again, anecdotally, I’ve seen someone in my community with kidneys failing and dead three weeks after the diagnosis. These aren’t just statistics to us. They are people. – Community Leader
  UVA and DaVita are both in the area and they are very busy. UVA opened up another location. – Other Health Provider
  High prevalence of dialysis patients. High prevalence of risk factors, such as metabolic dysfunction and diabetes that lead to kidney disease. – Other Health Provider

Co-Occurrences

- It goes along with poorly controlled hypertension and diabetes. – Physician
Contributing Factors

Similar to diabetes, strategies to combat kidney disease require a lifestyle change, which can seem impossible. Perhaps primary care screenings could help prevent kidney disease, but attending wellness check-ups not normalized in our community. Many folks don’t have a PCP at all. – Social Services Provider
SEPTICEMIA

ABOUT SEPSIS

Sepsis is the body’s extreme response to an infection. It is a life-threatening medical emergency. Sepsis happens when an infection you already have—in your skin, lungs, urinary tract, or somewhere else—triggers a chain reaction throughout your body. Without timely treatment, sepsis can rapidly lead to tissue damage, organ failure, and death.

When germs get into a person’s body, they can cause an infection. If that infection isn’t stopped, it can cause sepsis. Anyone can get an infection and almost any infection can lead to sepsis. Certain people are at higher risk:

- Adults 65 or older
- People with chronic medical conditions, such as diabetes, lung disease, cancer, and kidney disease
- People with weakened immune systems
- Children younger than one

— Centers for Disease Control (https://www.cdc.gov/sepsis/what-is-sepsis.html)

Age-Adjusted Septicemia Deaths

Between 2018 and 2020, the Total Area reported an annual average age-adjusted septicemia mortality rate of 9.3 deaths per 100,000 population.

Septicemia: Age-Adjusted Mortality
(2018-2020 Annual Average Deaths per 100,000 Population)

POTENTIALLY DISABLING CONDITIONS

Multiple Chronic Conditions

Among Total Area survey respondents, most report currently having at least one chronic health condition.

In fact, 41.3% of Total Area adults report having three or more chronic conditions.

**BENCHMARK** ➤ Less favorable than the national finding.

**TREND** ➤ Denotes a significant decrease since the 2019 survey.

**DISPARITY** ➤ Higher in Augusta County. More often reported among adults age 40+ (especially seniors) and lower-income respondents.

Currently Have Three or More Chronic Conditions

For the purposes of this assessment, chronic conditions include:
- Asthma
- Cancer
- Chronic pain
- Diabetes
- Diagnosed depression
- Heart attack/angina
- High blood cholesterol
- High blood pressure
- Kidney disease
- Lung disease
- Obesity
- Stroke

Multiple chronic conditions are concurrent conditions.

## Activity Limitations

**ABOUT DISABILITY & HEALTH**

Studies have found that people with disabilities are less likely to get preventive health care services they need to stay healthy. Strategies to make health care more affordable for people with disabilities are key to improving their health.

In addition, people with disabilities may have trouble finding a job, going to school, or getting around outside their homes. And they may experience daily stress related to these challenges. Efforts to make homes, schools, workplaces, and public places easier to access can help improve quality of life and overall well-being for people with disabilities.

– Healthy People 2030 (https://health.gov/healthypeople)

A total of 27.3% of Total Area adults are limited in some way in some activities due to a physical, mental, or emotional problem.

**DISPARITY**  More often reported among women, adults age 40+, and lower-income residents.

Notes: Asked of all respondents.

Among those rating this issue as a “major problem,” reasons related to the following:

**Prevalence/Incidence**

I’ve heard from friends and colleagues that one reason for our workforce shortage is people being on disability. – Social Services Provider

How many patients I see with complaints of chronic pain and are on disability. – Physician

High prevalence of disability cases and high demand for pain management. – Other Health Provider

Augusta Health has a pain clinic, so there must be patients that need that service. The scooters at Walmart and the grocery stores are always in use. – Other Health Provider

I am uncertain regarding the statistics, but disability and chronic pain are major problems in most communities. – Social Services Provider

Disability from CVA and other neurological impairments are very common, and there is very little in terms of services to support them. – Other Health Provider

I speak to many with these issues. – Social Services Provider

I see and hear about disability conditions and chronic pain from church members. I see it at the AH Fitness Center. – Community Leader

In our community, we can live with the pain, but we can’t produce money for medical procedures we can’t afford. What other option do we have? – Community Leader

**Contributing Factors**

There are many individuals who are on disability or who suffer from chronic pain in the community and are not able to work or are limited in the work they can do (whether that is in their home or outside of the home), which can increase financial and emotional stress for patients and their loved ones. Some of the primary care offices in the area have policies against managing chronic pain and disability, and the specialist’s offices equipped to help these patients are limited. – Social Services Provider

Office does not manage chronic pain, but we certainly see people who are greatly affected by it. Because of physical jobs, physical injuries are often cumulative and disabling. Due to opioid epidemic, other ways must be found to manage chronic pain, often inadequate. It affects other chronic diseases, such as diabetes/obesity. – Physician

Again, lack of access plays a major role in this. Residents too often overlook early stages of conditions which will inevitably devolve into chronic pain. Lack of education about pain is not limited to local residents: It’s a national (and increasingly widespread) problem. – Community Leader

Not enough public transportation for disabled to use, high costs of medical care and support, lack of insurance. – Social Services Provider

There are limited resources in the community focused on helping those with disabilities to maintain their independence. Disabilities and chronic pain can occur at any age, but often they develop as people age. With a higher-than-average percentage of people over age 60 in our community, there are more people with these issues. There’s also currently a significant shortage of home health aides and other such supports in our area. – Social Services Provider
People with injuries or chronic conditions often do not seek appropriate care and treatment due to financial burden, transportation, or distrust in the healthcare system. Many who do seek care are labeled as drug seekers and then "give up" on finding help for their pain issues. – Public Health Representative

**Follow-Up/Support**

Support for people and families with debilitating disease, such as ALS. When a family member has been diagnosed with ALS particularly, their lives and needs change drastically in such a small amount of time. – Other Health Provider

We lack good social supports for those experiencing disability and chronic pain. – Other Health Provider

There is a lack of support for older adults with chronic pain and diseases in our community. Pain medications are rarely prescribed due to the fear of narcotic additions, and other "natural alternatives" are not yet offered in Virginia. For people in our area with diseases and chronic pain, they have nowhere to turn for pain management. For example, someone I know has a chronic disease and a massive amount of pain and they are not even allowed to take ibuprofen due to their condition. This person is still working but thinking of getting on disability because their pain is so unmanageable. – Other Health Provider

**Aging Population**

An aging population in these communities means more people leaving the workforce before Social Security retirement age and trying to manage chronic pain due to conditions like arthritis, mobility limitations, etc. – Public Health Representative

**Alcohol/Drug Use**

Large population with chronic pain in setting of community with some people with opioid dependence. – Physician

**Access to Care/Services**

Lack of health care or attention to health care when younger. Chronic pain seems to be prevalent in the area. – Social Services Provider

**Homelessness**

Forty percent of persons experiencing homelessness report having one or more disabling conditions in our community. Folks who receive SSI cannot afford to pay rent on their own, much less any enjoyable life activities. – Social Services Provider

**Impact on Quality of Life**

Disability and chronic pain are major problems because they diminish quality of life for sufferers who often can't work or lead active, healthy lives. This leads to even further deterioration of health and can cause depression, anxiety, and dependence on pain medication. – Community Leader

**Labor Shortage**

A significant labor shortage in the home care industry has left many frail older adults without the support they need to live independently, leading to health and safety problems and unnecessary placement in long-term care. – Social Services Provider
Alzheimer’s Disease

ABOUT DEMENTIA

Alzheimer’s disease is the most common cause of dementia and the sixth leading cause of death in U.S. adults.1 Nearly 6 million people in the United States have Alzheimer’s, and that number will increase as the population ages.

Dementia refers to a group of symptoms that cause problems with memory, thinking, and behavior. People with dementia are more likely to be hospitalized, and dementia is linked to high health care costs.

While there’s no cure for Alzheimer’s disease, early diagnosis and supportive care can improve quality of life. And efforts to make sure adults with symptoms of cognitive decline — including memory loss — are diagnosed early can help improve health outcomes in people with dementia. Interventions to address caregiving needs can also help improve health and well-being in people with dementia.

– Healthy People 2030 (https://health.gov/healthypeople)

Age-Adjusted Alzheimer’s Disease Deaths

Between 2018 and 2020, there was an annual average age-adjusted Alzheimer’s disease mortality rate of 36.6 deaths per 100,000 population in the Total Area.

BENCHMARK ➔ Worse than state and US rates.

DISPARITY ➔ Considerably higher in Staunton.

Staunton City  35.6%
Waynesboro City 29.9%
Augusta County 34.5%

Sources: 2022 PRC Community Health Survey, PRC, Inc. [Item 321]
Notes: Asked of all respondents.
Key Informant Input: Dementia/Alzheimer’s Disease

Key informants taking part in an online survey were most likely to consider Dementia/Alzheimer’s Disease as a “moderate problem” in the community.

Perceptions of Dementia/Alzheimer’s Disease as a Problem in the Community (Key Informants, 2022)

- Major Problem: 19.2%
- Moderate Problem: 57.0%
- Minor Problem: 20.5%
- No Problem At All: 3.3%

Sources: PRC Online Key Informant Survey, PRC, Inc.
Notes: Asked of all respondents.

Among those rating this issue as a “major problem,” reasons related to the following:

Aging Population

- Ours is an older population. I don't know how we can possibly have enough caregivers to relieve the family members who end up being overwhelmed by care of their loved ones. – Community Leader
- Increasing incidence of the condition, particularly with growing size of the aging population, and the need for greater support or resources to help both persons suffering with the condition as well as the family involved in the care of the person. – Community Leader
- People are living longer, and that this disease is running rampant through the elderly community and there is no cure. Preventive medicines don’t work because by the time the family realizes someone is suffering from this, it is too late. – Community Leader
- It is common among the elderly, and there are a larger percentage of elderly in this area. – Other Health Provider
- I don't know if it is statistically, I answered that way based on our aging population. – Social Services Provider
- We are an aging population and there is stigma tied to these diseases. – Social Services Provider
- Our area has a higher percentage of older individuals than the state or national average. This leads to more people with dementia diagnosis, and thus more family caregivers. Dementia has dramatic impacts on the family, as well as the person living with dementia. – Social Services Provider
- Aging population. – Social Services Provider

Prevalence/Incidence

- I have known many people with this disease living in this area. – Other Health Provider
- Prevalence seems to be rising. – Community Leader
- National numbers indicate such. – Community Leader
- Growing rates. – Physician
- I believe it's a major problem throughout the United States. I see many patients with undiagnosed dementia, need for increased neurology presence. – Physician
- It appears the incidence of this disease is increasing nationwide. – Other Health Provider
- Dementia/Alzheimer's is a growing elder problem. We don't have nearly adequate research or resources to help this population. – Other Health Provider

Access to Care/Services

- Lack of day care/respite care. – Community Leader
- Alzheimer's/dementia placement. – Other Health Provider
- Many people in the community have it but don't have the resources available to get the support they need. – Other Health Provider
- There are very few placement options for individuals who need memory care placement after they can no longer live alone. – Other Health Provider
- Lack of neurology. – Physician
Contributing Factors

Our local population of Medicare-aged community members is growing, but the resources available for those experiencing dementia have not expanded. Care for those who are in poverty is particularly challenging, with very limited support options available locally that accept Medicaid. There is only one secure dementia unit locally.

– Other Health Provider

35,151 SAW residents, or 28.24%, are 60 years of age or older, according to UVA’s Weldon Cooper Center. This is far above the 22.56% state’s population of older adults. The number of residents living with dementia is steadily increasing as the Baby Boomers age, bringing with it an increasing number of family caregivers bearing the physical, financial, and emotional stress that caregiving brings. The incidence of physical health problems extends not only to those living with dementia but to caregivers, extended family, and the community at large.

Health care providers, as a rule, are not well-equipped to provide support to these residents.

– Social Services Provider

High incidence, lack of availability of support and facilities, including day facilities.

– Community Leader

High prevalence, decreased community services, and little to no attention to prevention.

– Other Health Provider

Follow-Up/Support

Our families who are managing individuals with dementia/Alzheimer’s do not have the support they need to manage these individuals at home. They often end up in facilities with poor outcomes.

– Social Services Provider

Lack of resources for families trying to care for their own. Memory care unit living is well beyond the financial reach of many residents -- and finding affordable in-home care is nearly impossible. It’s also difficult to find a central source of information/help for these patients and their families.

– Community Leader

Not enough support groups for families, good facilities are not affordable. In home help is not obtainable for the middle-class working family.

– Other Health Provider

Affordable Care/Services

The level of care folks require with dementia/Alzheimer’s is a major cost both monetarily (for specific care facilities) and ecumenically among families who care for individuals 24/7.

– Social Services Provider

Caregiving

A total of 27.7% of Total Area adults currently provide care or assistance to a friend or family member who has a health problem, long-term illness, or disability.

BENCHMARK ➤ Higher than the US finding.

TREND ➤ Represents a significant increase from previous surveys.

Act as Caregiver to a Friend or Relative with a Health Problem, Long-Term Illness, or Disability

The top health issues affecting those receiving their care include:

- Dementia/cognitive impairment
- Old age/frailty
- Heart disease
- Cancer
- Mental illnesses

ABOUT FAMILY PLANNING

Nearly half of pregnancies in the United States are unintended, and unintended pregnancy is linked to many negative outcomes for both women and infants. ...Unintended pregnancy is linked to outcomes like preterm birth and postpartum depression. Interventions to increase use of birth control are critical for preventing unintended pregnancies. Birth control and family planning services can also help increase the length of time between pregnancies, which can improve health for women and their infants.

Adolescents are at especially high risk for unintended pregnancy. Although teen pregnancy and birth rates have gone down in recent years, close to 200,000 babies are born to teen mothers every year in the United States. Linking adolescents to youth-friendly health care services can help prevent pregnancy and sexually transmitted infections in this age group.

– Healthy People 2030 (https://health.gov/healthypeople)

Births to Adolescent Mothers

Between 2013 and 2019, there were 23.3 births to adolescents age 15 to 19 per 1,000 women age 15 to 19 in the Total Area.

BENCHMARK ▶ Less favorable than the statewide rate.

DISPARITY ▶ Considerably higher in Waynesboro. Higher among White and Hispanic female adolescents.

Teen Birth Rate
(Births to Adolescents Age 15-19 per 1,000 Females Age 15-19, 2013-2019)

Notes: • This indicator reports the rate of total births to women under the age of 15–19 per 1,000 female population age 15–19. This indicator is relevant because in many cases, teen parents have unique social, economic, and health support services. Additionally, high rates of teen pregnancy may indicate the prevalence of unsafe sex practices.

Sources: PRC Online Key Informant Survey, PRC, Inc.
Notes: Asked of all respondents.

Among those rating this issue as a “major problem,” reasons related to the following:

 Contributing Factors

While this may not affect large numbers, for those that are impacted it is a major problem. Lack of health literacy for some parents and lack of sufficient numbers of pediatricians and inpatient care for infants in the immediate community is problematic. Resources such as healthy foods, financial support, day cares, etc., are limited to some parents and their infants. – Social Services Provider

Lack of knowledge of low-cost resources. Political pressure to avoid family planning help in public places. Stigma of infant health program use. Significant lack of appropriate parenting. – Social Services Provider

I believe that the teen pregnancy rates are increasing but am not sure if that is true. I have also heard that doctors’ appointments, etc., were pushed back by the pandemic and that nonemergency health care procedures were delayed. – Social Services Provider

Trauma. Free will. Adults who haven’t healed themselves trying to heal themselves with babies. Substance use disorder is rampant. – Social Services Provider
Again, I am not certain of the extent of the problem, but just accessing basic healthcare for mothers and their infants can be very difficult. It is important that mothers know that they can qualify for Medicare (or is it Medicaid?) when they are pregnant, and that their children can be covered once born in the U.S. The U.S. healthcare system can generally be confusing, daunting even, for Hispanic immigrants – especially so for expectant mothers. Perhaps more education on the resources that are available to expectant mothers. Channel them somehow into pediatric care, guide them, using language they understand. – Social Services Provider

Teen Pregnancy

Our teen pregnancy rate in Waynesboro exceeds the state average. Even though there have been a number of interventions to address this issue, the pregnancy rate remains high. The children born to young mothers and fathers are more at-risk for adverse outcomes. – Community Leader

Our teen pregnancy rates always seem to be absurdly high. I worry about the resources that teens have when they are still kids themselves about to give birth. – Community Leader

High school pregnancy leading to infant care without education. – Other Health Provider

Awareness/Education

Individuals do not have access or are unaware of how to access resources around family planning. This would include general information for family planning to contraception access. Many are unaware of the types and safety of contraception and the benefits. The same for infant health, education, and resources for new parents are not readily available to all parents or they are unaware of how to access resources. – Social Services Provider

Rural communities with lower levels of education result in less pregnancy prevention. – Other Health Provider

Unplanned Pregnancy

Unplanned pregnancies, especially in low-income populations, limit the ability of those affected to improve their situations. No infant should be unwanted, unloved, and uncared for or under-cared for. – Other Health Provider

High unplanned pregnancy rates. – Community Leader

Alcohol/Drug Use

Drug addiction contributes to infant health issues. – Social Services Provider

Access to Care/Services

The health department is the only resource in our immediate area that offers Title X and sliding scale for reproductive health/family planning services. Many patients will not seek care at the health department because of the stigma it carries. The HD no longer offers prenatal care, BabyCare, or case management, which leaves a large void for uninsured and high-risk mothers and their babies. – Public Health Representative

Due to COVID-19

I currently work at the Waynesboro Health Department, and we serve this population. The services have decreased due to COVID. Most of our children are behind in immunizations. A CDC worker is currently working in the Waynesboro High School to connect students with method options. – Community Leader

Vulnerable Population

The mortality rates of Black mothers in childbirth are skewed when compared to other races, and many times adding a child into a place where people are already living below the poverty line compounds things. – Community Leader
MODIFIABLE HEALTH RISKS
**NUTRITION**

**ABOUT NUTRITION & HEALTHY EATING**

Many people in the United States don’t eat a healthy diet. …People who eat too many unhealthy foods — like foods high in saturated fat and added sugars — are at increased risk for obesity, heart disease, type 2 diabetes, and other health problems. Strategies and interventions to help people choose healthy foods can help reduce their risk of chronic diseases and improve their overall health.

Some people don’t have the information they need to choose healthy foods. Other people don’t have access to healthy foods or can’t afford to buy enough food. Public health interventions that focus on helping everyone get healthy foods are key to reducing food insecurity and hunger and improving health.

– Healthy People 2030 (https://health.gov/healthypeople)

**Daily Recommendation of Fruits/Vegetables**

**Adults**

A total of 31.8% of Total Area adults report eating five or more servings of fruits and/or vegetables per day.

**TREND ►** Marks a significant decrease from the 2016 baseline.

**DISPARITY ►** Male respondents and lower-income adults are less likely to report eating fruits and vegetables.

**Consume Five or More Servings of Fruits/Vegetables Per Day**

Activity Levels

Adults

ADULTS: RECOMMENDED LEVELS OF PHYSICAL ACTIVITY

Adults should do 2 hours and 30 minutes a week of moderate-intensity (such as walking), or 1 hour and 15 minutes (75 minutes) a week of vigorous-intensity aerobic physical activity (such as jogging), or an equivalent combination of moderate- and vigorous-intensity aerobic physical activity. The guidelines also recommend that adults do muscle-strengthening activities, such as push-ups, sit-ups, or activities using resistance bands or weights. These activities should involve all major muscle groups and be done on two or more days per week.

The report finds that nationwide nearly 50 percent of adults are getting the recommended amounts of aerobic activity and about 30 percent are engaging in the recommended muscle-strengthening activity.

A total of 14.4% of Total Area adults regularly participate in adequate levels of both aerobic and strengthening activities (meeting physical activity recommendations).

BENCHMARK ➤ Less favorable than found across the state and nation. Fails to satisfy the Healthy People 2030 objective.

DISPARITY ➤ Lower-income adults are less likely than higher-income adults to meet physical activity recommendations.

Meets Physical Activity Recommendations

Notes:
- Asked of all respondents.
- Meeting both guidelines is defined as the number of persons age 18+ who report light or moderate aerobic activity for at least 150 minutes per week or who report vigorous physical activity 75 minutes per week or an equivalent combination of moderate and vigorous-intensity activity and report doing physical activities specifically designed to strengthen muscles at least twice per week.

Children

CHILDREN: RECOMMENDED LEVELS OF PHYSICAL ACTIVITY

Children and adolescents should do 60 minutes (1 hour) or more of physical activity each day.

www.cdc.gov/physicalactivity

Among Total Area children age 2 to 17, 43.4% are reported to have had 60 minutes of physical activity on each of the seven days preceding the interview (1+ hours per day).

BENCHMARK ► More favorable than the US finding.

TREND ► Trending significantly lower over time.
Child Is Physically Active for One or More Hours per Day
(Parents of Children Age 2-17)

Sources:
2022 PRC Community Health Survey, PRC, Inc. [Item 109]
2020 PRC National Health Survey, PRC, Inc.

Notes:
* Asked of all respondents with children age 2-17 at home.
* Includes children reported to have one or more hours of physical activity on each of the seven days preceding the survey.

Access to Physical Activity

In 2019, there were 13.5 recreation/fitness facilities for every 100,000 population in the Total Area.

**DISPARITY** ➤ Considerably lower in Augusta County.

Population With Recreation & Fitness Facility Access
(Number of Recreation & Fitness Facilities per 100,000 Population, 2019)

- **Staunton City**: 29.5
- **Waynesboro City**: 19.0
- **Augusta County**: 6.8
- **Total Area**: 13.5
- **VA**: 13.8
- **US**: 12.2

Here, recreation/fitness facilities include establishments engaged in operating facilities which offer “exercise and other active physical fitness conditioning or recreational sports activities.” Examples include athletic clubs, gymnasiums, dance centers, tennis clubs, and swimming pools.
ABOUT OVERWEIGHT & OBESITY

Obesity is linked to many serious health problems, including type 2 diabetes, heart disease, stroke, and some types of cancer. Some racial/ethnic groups are more likely to have obesity, which increases their risk of chronic diseases.

Culturally appropriate programs and policies that help people eat nutritious foods within their calorie needs can reduce overweight and obesity. Public health interventions that make it easier for people to be more physically active can also help them maintain a healthy weight.

– Healthy People 2030 (https://health.gov/healthypeople)

Body Mass Index (BMI), which describes relative weight for height, is significantly correlated with total body fat content. The BMI should be used to assess overweight and obesity and to monitor changes in body weight. In addition, measurements of body weight alone can be used to determine efficacy of weight loss therapy. BMI is calculated as weight (kg)/height squared (m$^2$). To estimate BMI using pounds and inches, use: \[\text{BMI} = \frac{\text{weight (pounds)}}{\text{height squared (inches$^2$)}} \times 703.\]

In this report, overweight is defined as a BMI of 25.0 to 29.9 kg/m$^2$ and obesity as a BMI $\geq$30 kg/m$^2$. The rationale behind these definitions is based on epidemiological data that show increases in mortality with BMIs above 25 kg/m$^2$. The increase in mortality, however, tends to be modest until a BMI of 30 kg/m$^2$ is reached. For persons with a BMI $\geq$30 kg/m$^2$, mortality rates from all causes, and especially from cardiovascular disease, are generally increased by 50 to 100 percent above that of persons with BMIs in the range of 20 to 25 kg/m$^2$.

Adult Weight Status

<table>
<thead>
<tr>
<th>CLASSIFICATION OF OVERWEIGHT AND OBESITY BY BMI</th>

</tbody>
</table>

Overweight Status

A total of 7 in 10 Total Area adults (71.8%) are overweight.

BENCHMARK ➤ Worse than the Virginia and US findings.
TREND ➤ Denotes a significant increase from the 2016 benchmark.
DISPARITY ➤ Higher in Augusta County.

Prevalence of Total Overweight (Overweight and Obese)

The overweight prevalence above includes 40.9% of Total Area adults who are obese.

BENCHMARK ➤ Fails to satisfy the Healthy People 2030 objective.
TREND ➤ Marks a significant increase over time.
DISPARITY ➤ More often reported among communities of color and adults age 40 to 64 (when compared to those age 65+).
Prevalence of Obesity
(Total Area, 2022)
Healthy People 2030 = 36.0% or Lower

Sources: 2022 PRC Community Health Survey, PRC, Inc. [Item 130]

Notes: Based on reported heights and weights, asked of all respondents.
The definition of obesity is having a body mass index (BMI), a ratio of weight to height (kilograms divided by meters squared), greater than or equal to 30.0, regardless of gender.

Relationship of Overweight With Other Health Issues
Overweight and obese adults are more likely to report a number of adverse health conditions, as outlined in the following chart.

Sources: 2022 PRC Community Health Survey, PRC, Inc. [Item 128]

Notes: Based on reported heights and weights, asked of all respondents.

The correlation between overweight and various health issues cannot be disputed.
Children’s Weight Status

ABOUT WEIGHT STATUS IN CHILDREN & TEENS

In children and teens, body mass index (BMI) is used to assess weight status – underweight, healthy weight, overweight, or obese. After BMI is calculated for children and teens, the BMI number is plotted on the CDC BMI-for-age growth charts (for either girls or boys) to obtain a percentile ranking. Percentiles are the most commonly used indicator to assess the size and growth patterns of individual children in the United States. The percentile indicates the relative position of the child’s BMI number among children of the same sex and age.

BMI-for-age weight status categories and the corresponding percentiles are shown below:

- Underweight <5th percentile
- Healthy Weight ≥5th and <85th percentile
- Overweight ≥85th and <95th percentile
- Obese ≥95th percentile

– Centers for Disease Control and Prevention

Based on the heights/weights reported by surveyed parents, 34.3% of Total Area children age 5 to 17 are overweight or obese (≥85th percentile).

TREND ► Marks a significant decline over time.

Prevalence of Overweight in Children
(Parents of Children Age 5-17)

Sources:
- 2022 PRC Community Health Survey, PRC, Inc. [Item 131]
- 2020 PRC National Health Survey, PRC, Inc.

Notes:
- Asked of all respondents with children age 5-17 at home.
- Overweight among children is determined by children’s Body Mass Index status at or above the 85th percentile of US growth charts by gender and age.
The childhood overweight prevalence above includes 21.9% of area children age 5 to 17 who are obese (≥95th percentile).

**TREND ➤** Marks a significant decline over time.

**DISPARITY ➤** More often reported among parents of children age 5 to 12.

Sources:  
- PRC Online Key Informant Survey, PRC, Inc.

Notes:  
- Asked of all respondents.
Among those rating this issue as a “major problem,” reasons related to the following:

Contributing Factors

Lack of understanding that food choices impact not just weight but overall quality of life. No easy access to better food choices. I’m sure better food choices are also cost-prohibitive. Physical activity doesn’t seem to be a priority. – Public Health Representative

Lack of awareness among the people impacted on proper behavior and lack of easily accessible amenities that could promote healthy behavior, e.g., greenways, parks, bike paths, etc. – Community Leader

Insufficient public education on healthy food choices. People lacking time for healthy food prep and exercise.

Cost of healthy foods. Current stress of pandemic, political and world events. Lack of healthy food role-modeling in health care settings, including cafeteria food options and rewards, appreciation, and celebration events. – Other Health Provider

Access to information, access to programs and services, fitness facilities denying the right to ASL interpretation in violation of federal non-discrimination laws, lack of culturally sensitive education. – Social Services Provider

Lack of understanding of risk. Lack of low-cost programs. Stigma. – Social Services Provider

Again, lack of education and affordable, nutritional options for food and gym memberships lead to weight gain and poor nutrition. Technology has also played a role in peoples’ lack of physical activity. – Community Leader

For those with limited incomes, money to buy nutritious food. Lack of desire to exercise or no place to do so. Overeating, poor nutritional foods that are less expensive than healthy foods. – Social Services Provider

Advertisements for high-fat foods, price of healthier food, and time restraints in order to exercise. Too many activities that don’t require movement, i.e., video games, numerous television channels, and the constant use of cell phones. – Community Leader

Lack of education on the importance of physical activity. Food insecurity. – Other Health Provider

Lack of knowledge, lack of transportation/accessibility to area walking paths, parks. Increased availability of high fat/calorie, low nutrient foods. – Other Health Provider

Access to and education about healthy food. – Other Health Provider

Healthy food is more expensive. Very few people sit down to prepare meals, they just eat on the go. There’s no incentive for physical activity. Very few bike paths and sidewalks to get to and from areas. – Community Leader

Cost of healthy eating. Education is needed on healthy eating and exercise. Access to gyms and YMCA (lack of transportation) and cost of those programs. Education on free exercise in parks through walking and bike paths, greenways and hiking trails. Lack of transportation to access those free options. A perception that greenways and other walking, bike, hike trails are unsafe. – Social Services Provider

Lack of access to healthy foods and too many fast-food options. Lack of sidewalks and only a few well-maintained parks in the area. Lack of funding for nutrition services and for fitness programs. The need for more nutrition/cooking education for all members of community. – Other Health Provider

One of the greatest challenges around nutrition is access to fresh, healthy, affordable foods. Many people in our community are considered to be food insecure. One of the greatest challenges to physical activity is lack of sidewalks and bike paths in the community that would make it safe for people to walk and bike. – Other Health Provider

Lack of access to affordable healthy food and gym options is one of the biggest challenges for many. Time to participate in physical activity for those that work long hours or have to manage family needs. Lack of health literacy. These all contribute then to obesity problems within a community. Workplaces also do not support breaks that would allow for physical activity and often do not provide healthy food options onsite. – Social Services Provider

Our community tends to be less active and consume pre-packaged (less healthy) foods. – Other Health Provider

My personal opinion is that access to affordable, nutritious choices are often quite limited. As well as the general adherence to education provided regarding nutrition, physical activity and weight. – Social Services Provider

We have become a sedentary society, and nutrition, physical activity, and obesity all play a role in controlling other comorbidities. We have obesity issues in children and adults. Access to health food is being worked on, as well. – Other Health Provider

People are working too much and staying too stressed to focus on their physical activity. Also, children are not getting enough play outside and away from the television/computer. Access to nutritional foods has become more reasonable in terms of cost (with SNAP), but it is still not a priority for people. Obesity is rampant, especially among the most impoverished in our community (which is counterintuitive but true). Cheap food is unhealthy food. – Social Services Provider

Large obesity problem. Lack of effective, coordinated programs to educate people on food choices, portion control, exercise, and fitness that is affordable. – Physician

The lack of commitment to establish a plan and follow through. Some people may want to go to a gym but may not be able to afford. There are also time constraints for some people. Also, the difficulty with affording to buy healthy foods. – Other Health Provider
Time management around physical fitness and meal planning, free services, access to affordable nutritious foods, too much processed food and fast foods, lack of knowledge around cooking and food label reading. Lack of motivation. – Community Leader

Our challenges seem to be those shared by communities nationwide. As a rural community, we are heavily car-dependent. Schools have cut back on their physical education opportunities, and meals provided tend to be less than nutritionally helpful (although I am grateful to see increasing numbers of free lunch/free breakfast programs). – Community Leader

Our community is getting "bigger." Healthy habits are hard to develop, particularly if you are worried about basic needs. Health food is expensive, and there are food deserts as well throughout the region. Physical activity may be limited for those with physical limitations or those without transportation to parks, etc., lack of safe walking routes, after-school and summer sports are often expensive or hard to coordinate in terms of transportation. – Social Services Provider

Most people in our community need to improve their nutrition and physical activity. We have a significant problem with obesity. – Other Health Provider

There is a significant preference for high-caloric food in the community, and the cost of healthier foods is challenging for low-income people. – Other Health Provider

Lack of education. Lack of resources, generational cycle of unhealthy behaviors passed down. – Social Services Provider

OBESITY is a huge issue in our community. This stems from a lack of education about the importance of a healthy diet and physical activity at a young age. Cost of healthy foods, especially now with the current inflation, prevents lower-income families from cooking with REAL foods. Lack of caring – the older generation is set in their ways. Their unhealthy cooking habits and lack of physical activity probably trace back to the way THEY were raised. Appalachian residents and regional food ways play a big part in this. The focus of most diets in our area (especially lower-income areas) are based on high-carb and fried foods. Church socials, family influences, cultural trends and the fact that schools put so much emphasize on "food parties" contribute to this. If we target children, we might be able to make a difference! Food addiction is another issue in our community, and there are NO resources (that I am aware of) for food addiction for our community. – Other Health Provider

Lifestyle, lack of affordable programs related to exercise, weight loss. – Other Health Provider

Lack of self-care. Lack of education/awareness. Lack of affordable resources. Discrepancies, for example, between nutrition goals and school meals/corporate marketing from food industry. Lack of integrated care approach. – Social Services Provider

Metabolic syndrome – this is the gateway to a myriad of health conditions, including heart disease, stroke, diabetes, certain cancers, hypertension, etc. Caught early, people can be educated in lifestyle changes that will mitigate their risk. Food addictions – research is expanding in this area of study. – Other Health Provider

Family history and habits of poor nutrition and fitness. High levels of obesity. High percentage of low-income families. – Social Services Provider

Access to easy, healthy food and knowing how to prepare it. Also, need more sidewalks for walking. – Other Health Provider

Too much emphasis on weight loss and not enough on healthy lifestyle habits such as good nutrition, physical activity. Nutrition education for the community must include teaching people how to shop and cook on a budget. Fitness program membership costs are not a priority for those with limited incomes, and weight bias keeps people from participating for many reasons. More focus on behaviors which improve health and less on the number on the scale which does not directly equate to how healthy a person is. – Other Health Provider

Lack of individuals who are interested in exercise and diet. Little interest in learning more about self-care. Expense for services is prohibitive. For some fall within the Alice data population. Which seems to be over 40% of our population currently in Waynesboro. – Social Services Provider

Local diet tends to be high-calorie/high-fat. Limited access to free or affordable exercise programs. Limited places to walk/run other than in the roads. – Other Health Provider

Fitness facilities cost money. Eating poorly is cheaper on the front end (not when your body starts to shut down), and organizations often prepare vegetables that aren’t part of our cultural context. – Community Leader

How to get the attention of young children who live in poverty and their parents have to spend so much money on fast food to keep meal costs lower, plus so many overweight people do not seem to want to change lifestyle to accommodate a healthier life. – Community Leader

Lifestyle

Active lifestyles are not “trendy” in the area. – Social Services Provider

Maintaining healthy weight and active lifestyle. – Public Health Representative

All issues relate to personal choice, changing behavior will be difficult. Not really sure how you change behavior when it’s up to the individual to make the necessary changes in lifestyle. – Community Leader

Compliance and follow through to improve these outcomes. – Other Health Provider
Actually, I think there are many fitness facilities and many nutrition programs (a very large amount if you want to participate virtually/online). It's just really hard to change your lifestyle as much as you need to in order to have a lasting change. I know it's popular to talk about access/affordable food – but I think those are kind of 'convenient' reasons that shift the focus away from the need to make your own personal changes. For the first time in my life, post-COVID, I need to lose 10 pounds. And it's really hard to break decades of habits to get that done. And once I do it, I'm not sure what it will be like to have to maintain it. – Other Health Provider

As previously mentioned, asking folks to make a lifestyle change without any intervention or education is a hard ask. We ask people to lose weight, eat better, or exercise more, and for folks who don't have a framework for what that looks like, they don't even know where to begin. Healthy food is not always cheap or accessible, and when people can access it, they often don't know how to prepare it. – Social Services Provider

Lack of individual initiative. – Community Leader

Getting patients involved in lifestyle changes. – Physician

Obesity

Obesity. – Other Health Provider

Our obesity prevalence is 33.1%, and much of this is due to the rural community, lack of transportation, and lack of access to fresh food because of the expense. – Social Services Provider

We have an obese community, which leads to multiple chronic medical illnesses. – Physician

Go shop at Walmart in either Staunton or Waynesboro. There are way too many people in poor, poor health in terms of their weight and physical activity, lack thereof. – Community Leader

Obesity is a significant concern. – Community Leader

An underlying issue that typically cuts across or involves many other health issues would be obesity/access to healthy nutritional sources. – Physician

Obesity. – Other Health Provider

Obesity (strongly correlated to the two previous categories I believe are major problems). – Community Leader

Awareness/Education

Many people attending our free meal program are not aware of what services are available for the health issues they or loved ones have. Since most health care services have relocated to Fishersville, there is a need for some type of health clinic in the Waynesboro area east of the river. – Social Services Provider

More education is needed in this area. – Social Services Provider

Education. People, like myself, do not take time for themselves. – Other Health Provider

A large and growing percentage of the population either doesn't understand the role of nutrition and physical activity for weight management or lacks the motivation or long-term support to maintain a healthy weight via healthy nutrition habits and physical activity. This has led to a continued high rate of cancer, cardiac disease, and diabetes in our community. – Other Health Provider

Poor health literacy. – Physician

Education, unwillingness to adapt a healthier lifestyle. – Community Leader

Access to Affordable Healthy Food

Access to fresh food due to monetary constraints. There are resources, but many do not have fresh food and/or frozen food. The majority is canned or boxed. Some clients don't have vehicles, and some don't have money to put in vehicles. – Other Health Provider

School nutrition programs seem to have declined with the “free meal” program in the county. Options are not as healthy. – Other Health Provider

Price of food increasing, leaving families with limited resources and money for nutritious food. Also, diet culture, in terms of problems related to obesity and weight. – Other Health Provider

The cost of fresh food versus prepackaged quick meals. Time for healthy meal prep. – Community Leader

For nutrition, increasing food costs make it even more challenging for people with limited income to get healthy fresh foods consistently. Also, our community has an abundance of fast-food restaurants and very limited restaurants that showcase great tasting healthy meals. So, the culture of the area is that healthy food is not for everyday consumption. Our community has some physical fitness type recreational activities, but not much of a variety to help people find something they really enjoy. – Social Services Provider

Cost of healthy food, normalized overweight. – Social Services Provider

Built Environment

There are relatively few chances to walk to basic needs due to the area’s land use pattern. – Community Leader
Lack of opportunity for free/low-cost year-round physical activity. Parks are good options during warm months, but during the winter the only options are outside the budget of many local residents. For Staunton, some walkability concerns related to absent sidewalks on main connector roads. Many roads in the area are dangerous for cyclists. – Public Health Representative

Lack of facilities in the region to make it easy to be active. – Social Services Provider

Need sidewalks and a place for activity. There is nothing to do in this area in the winter that is healthy. Our community has access to food problems and food pantries are often stocked with unhealthy, expired, and weird (what do you do with a box of whey protein or canned milk anyways--nobody wants to eat that!). – Other Health Provider

Disconnected walk/bike trails in SAW make biking to work/school difficult, limited access to fresh foods vs. prevalence of fast-food options, fitness centers can be cost prohibitive. – Other Health Provider

Access to Care/Services

Lack of resources for those with food and housing insecurity. – Physician

Accessibility of professionals to address prevention of chronic disease in those who are overweight/obese. Motivation to participate in available programs. COVID restrictions on available programs. – Other Health Provider

Lack of access to dieticians and other resources to help redesign eating patterns for better nutrition, especially for people with other health issues related to being overweight. – Community Leader

Insufficient Physical Activity

Lack of activity. – Other Health Provider

People need to make time to get physical. Our bodies are not automobiles. Break down, change parts, and keep driving. – Other Health Provider

Follow-Up/Support

Not enough support to eat healthy and be active. – Other Health Provider

Lack of support (financial, emotional) for improved physical activity and healthy eating. – Community Leader

Prevention/Screenings

The biggest issue is preventing people from becoming overweight. There should be a renewed emphasis on physical activity in our schools and workplaces, and affordable healthy food options. – Community Leader

Denial/Stigma

Denial by community members that obesity is a problem, therefore not seeking help. Discomfort with seeking help. – Community Leader
SUBSTANCE ABUSE

ABOUT DRUG & ALCOHOL USE

More than 20 million adults and adolescents in the United States have had a substance use disorder in the past year. Substance use disorders can involve illicit drugs, prescription drugs, or alcohol. Opioid use disorders have become especially problematic in recent years. Substance use disorders are linked to many health problems, and overdoses can lead to emergency department visits and deaths.

Effective treatments for substance use disorders are available, but very few people get the treatment they need. Strategies to prevent substance use — especially in adolescents — and help people get treatment can reduce drug and alcohol misuse, related health problems, and deaths.

– Healthy People 2030 (https://health.gov/healthypeople)

Age-Adjusted Cirrhosis/Liver Disease Deaths

Between 2018 and 2020, the Total Area reported an annual average age-adjusted cirrhosis/liver disease mortality rate of 14.5 deaths per 100,000 population.

BENCHMARK ▶ Worse than state and national rates. Fails to satisfy the Healthy People 2030 objective.

Alcohol Use

Excessive Drinking

Excessive drinking includes heavy and/or binge drinkers:

- **HEAVY DRINKERS** ► men reporting 2+ alcoholic drinks per day or women reporting 1+ alcoholic drink per day in the month preceding the interview.
- **BINGE DRINKERS** ► men reporting 5+ alcoholic drinks or women reporting 4+ alcoholic drinks on any single occasion during the past month.

A total of **18.4%** of area adults are excessive drinkers (heavy and/or binge drinkers).

BENCHMARK ► More favorable than the US percentage.

TRENDS ► Denotes a significant increase over time.

DISPARITY ► More often reported among men and adults younger than 65 (especially those age 18 to 39).

### Personal Impact From Substance Abuse

A majority of Total Area residents' lives have not been negatively affected by substance abuse (either their own or someone else's).

**Degree to Which Life Has Been Negatively Affected by Substance Abuse (Self or Other's)**

(Total Area, 2022)

- **Great Deal:** 10.5%
- **Somewhat:** 13.3%
- **Little:** 15.7%
- **Not At All:** 60.6%

**Sources:**
- 2022 PRC Community Health Survey, PRC, Inc. [Item 52]
**Notes:**
- Asked of all respondents.
However, 39.5% have felt a personal impact to some degree ("a little," "somewhat," or "a great deal").

DISPARITY ► More often reported among women, adults younger than 65, and lower-income adults.

**Life Has Been Negatively Affected by Substance Abuse (by Self or Someone Else)**

Notes:
- Includes response of "a great deal," "somewhat," and "a little."
Key Informant Input: Substance Abuse

The greatest share of key informants taking part in an online survey characterized Substance Abuse as a “major problem” in the community.

Perceptions of Substance Abuse as a Problem in the Community

(Key Informants, 2022)

- Major Problem: 55.3%
- Moderate Problem: 36.5%
- Minor Problem: 6.9%
- No Problem At All: 1.3%

Sources: PRC Online Key Informant Survey, PRC, Inc.
Notes: Asked of all respondents.

Among those rating this issue as a “major problem,” reasons related to the following:

Access to Care/Services

Lack of spaces in existing facilities, lack of rehabilitation opportunities. Connection between mental health and substance abuse. – Social Services Provider
Insufficient number of inpatient and outpatient programs in area. – Physician
Insufficient options for evidence based secular treatment support groups. Insufficient options for harm reduction through needle exchanges, free contraception, MAT, free testing for HIV/hepatitis/etc. – Public Health Representative
Lack of crisis support centers and detox centers. – Social Services Provider
No treatment centers locally. Difficult to get a bed, no insurance. – Community Leader
Need active and coordinated outpatient/inpatient detox and rehab programs. – Physician
Lack of facilities for continuum of care, starting with the time law enforcement is involved to rehabilitation. Very bad meth problem. – Other Health Provider
Access to high quality care. Lack of detox center. – Community Leader
I feel our greatest barrier is not having a crisis stabilization/detox center. – Social Services Provider
Lack of access to both inpatient and outpatient programs. Lack of drug court and other options for addressing substance abuse outside of the legal system. – Community Leader
Lack of services in the SAW. – Other Health Provider
Problem exceeds available community resources. – Community Leader
Little to no intermediate treatment programs, partial hospitalizations, intensive outpatient programs. No long-term treatment facilities for substance use or alcohol use disorders. – Other Health Provider
Lack of treatment programs affordable to all. – Community Leader
Lack of local treatment resources. – Other Health Provider
Lack of treatment. – Other Health Provider
There is no detox center or crisis stabilization unit and there is no funding at the local, state, or federal level. – Community Leader
Lack of facilities to treat patients. – Community Leader
I don’t even know where one would begin to access substance abuse treatment, and I'm a rather decently connected person. – Community Leader
Lack of access to care and overwhelmed, understaffed, and underfunded system. – Community Leader
Lack of a local detox medical center. The area is inundated with methamphetamine and prescription drug problems. There is a backlog of access to treatment and care. Long-term, constant treatment is needed for folks to have a chance to overcome addiction. – Community Leader
Limited options. Patients provided a "list" of resources, though I do not feel that much is invested to help get them enrolled and "navigate the system.” Those that enroll find resources helpful; however, not everybody is motivated enough to seek out resources and support. – Physician
Contributing Factors

Limited resources in identifying the problem. Limited resources for temporary facilities. Inability of law enforcement to keep the drugs off the street. – Other Health Provider

Lack of a formal, large-scale detox center to intervene and create pathways to recovery. Cycles of poverty for many families leading to substance abuse as their chosen remedy for poor mental health. – Social Services Provider

Lack of mental health resources – people self-medicate with substances when their mental health issues are left unaddressed. The availability of substances in our community; our area was once described to me as a “candy shop for addicts” by a family member with substance abuse issues. Early substance abuse in children and adolescents. Finding root causes for early substance abuse in our areas and implementing education and prevention programs is important. Substances are FAR too accessible in schools. – Other Health Provider

Lack of substance abuse services. Lack of knowledge of existing services. Fear of participating due to other personal factors, such as involvement with law enforcement, or potential loss of employment. – Community Leader

Lack of facilities. Too expensive. – Other Health Provider

Lack of mental health services, especially residential programs. Cost of those services when available. – Other Health Provider

The greatest barriers to needed substance abuse treatment are lack of crisis stabilization facilities, inpatient and outpatient treatment facilities, and the affordability of care and stigma. – Community Leader

Not enough services available and lack of transportation to those with abuse problems. – Social Services Provider

Lack of detox facilities, transportation to treatment, cost, wait lists for treatment (which is particularly unfortunate for SA issues). Often times, folks who might need a higher level of treatment are forced to settle for a more community-based approach due to lack of treatment options. There’s a different level of stigma associated with SA issues: people see if as a choice versus a brain disorder like other mental health issues. – Social Services Provider

I believe there are limited options in our community for SA treatment, which then lends to long waiting lists and overworked staff. Transportation issues are also a factor. – Social Services Provider

Stigma. Lack of free or low-cost treatment. Lack of knowledge of where to access helpful programs. – Social Services Provider

Lack of awareness of treatment options, how to access treatment, cost. – Community Leader

Identify those needing help and then finding counselors to assist. I know it’s a big problem but only from conversations with health care professionals. I know that there are many deaths from opioid overdose in this area, but it seems to be under the radar, and this is only one facet of a very big problem – Community Leader

Patients’ accountability, patients tend to not follow up with their treatment. Affordability of care, it is impossible for uninsured people to find support. – Social Services Provider

Desire on the part of the person using the substance, too few outpatient facilities, inadequate pay for the providers, self-pay for people without insurance, waiting lists due to the workforce shortage, transportation. – Social Services Provider

Funding and social support. – Community Leader

Insurance, inpatient/halfway houses to get people started on the road. – Physician

Transportation, cost, limited availability. – Other Health Provider

Awareness of different treatment options, number of treatment opportunities specifically focused on substance abuse, unwillingness to recognize need for help until incidents with law. – Community Leader

Lack of financial resources, lack of inpatient options, lack of support groups outside of self-help. – Social Services Provider
Financial insecurity, lack of LGBTQ-affirming programs, lack of sober spaces for LGBTQ adults, discrimination. – Social Services Provider

Addiction is a disease that often does not lend itself to treatment. Mental health issues, social isolation, transportation, and addictive patterns themselves are the greatest barriers. Also, the most prevalent treatment (methadone) is good physically for addicts but mentally I feel it encourages them to simply replace one drug with another. – Social Services Provider

Transportation, financial constraints, lack of treatment centers. – Other Health Provider

The person who is using substances have to want the help. Many times, family or friends will enable the person to continue the use (perhaps not meaning to do so, but still do). In addition, if insurance is involved, you have to start with outpatient treatment before you can have inpatient treatment (when often, the person needs inpatient care from the start). Also, inpatient treatment is often limited to the number of days that a person can stay in treatment and substance abuse is not a quick fix. – Other Health Provider

High prevalence and waning addiction services. Cost of services. Barriers to programs, especially inpatient treatment programs. – Other Health Provider

Cost of treatment is difficult, as well as lack of programs in the OP setting to provide support for patients. This pairs along with the mental health needs of our community. Unfortunately, SA then impacts other body systems, which lead to increase healthcare demand. – Other Health Provider

Lack of technology to access telehealth options. Lack of harm reduction focus. Lack of client choice. It does not work for judges to order treatment. Period. – Social Services Provider

Not enough providers for adults or youth. No inpatient detox or crisis facility. Lack of transportation to providers. People are apathetic to the issue and feel there is nothing they can do to help someone else. – Social Services Provider

Denial/Stigma

Recognizing the need in one’s own self. – Other Health Provider

Stigma. – Community Leader

Mental health. Stigma. Fear. Lack of folks who can walk alongside someone who is struggling in this area. – Social Services Provider

Stigma, shame, quality affordable care. – Community Leader

Awareness/Education

Lack of education on how addictive some of these substances can be and the importance of never starting down that path. – Other Health Provider

There are few known programs, need help that is more advertised and known. – Other Health Provider

Co-Occurrences

I see the interconnectedness of some of these issues. The man I knew with the kidney problems had a serious issue with alcohol dependency, especially Wild Irish Rose or something like that. – Community Leader

This is similar to mental health and typically management is one and the same as most of our community members with substance abuse issues will have coinciding mental health issues. – Physician

Substance Use Disorders

Substance use disorders. – Social Services Provider

Follow-Up/Support

Lack of support groups. – Community Leader

Diagnosis/Treatment

Treatment. – Other Health Provider

Youth

Our children are vaping illegal drugs. – Community Leader
**Most Problematic Substances**

Key informants (who rated this as a “major problem”) identified *methamphetamine/other amphetamines* as causing the most problems in the community, followed by *alcohol, prescription medications*, and *heroin/other opioids*.

TOBACCO USE

ABOUT TOBACCO USE

More than 16 million adults in the United States have a disease caused by smoking cigarettes, and smoking-related illnesses lead to half a million deaths each year.

Most deaths and diseases from tobacco use in the United States are caused by cigarettes. Smoking harms nearly every organ in the body and increases the risk of heart disease, stroke, lung diseases, and many types of cancer. Although smoking is widespread, it’s more common in certain groups, including men, American Indians/Alaska Natives, people with behavioral health conditions, LGBT people, and people with lower incomes and education levels.

Several evidence-based strategies can help prevent and reduce tobacco use and exposure to secondhand smoke. These include smoke-free policies, price increases, and health education campaigns that target large audiences. Methods like counseling and medication can also help people stop using tobacco.

– Healthy People 2030 (https://health.gov/healthypeople)

Cigarette Smoking

Cigarette Smoking Prevalence

A total of 18.0% of Total Area adults currently smoke cigarettes, either regularly (every day) or occasionally (on some days).

Cigarette Smoking Prevalence (Total Area, 2022)

Sources:  2022 PRC Community Health Survey, PRC, Inc. [Item 40]
Notes:  Asked of all respondents.
Note the following findings related to cigarette smoking prevalence in the Total Area.

**BENCHMARK ➤** Worse than the statewide percentage. Fails to satisfy the Healthy People 2030 objective.

**DISPARITY ➤** Men, adults younger than 65, and lower-income adults are more likely to report smoking cigarettes.

Sources: PRC Online Key Informant Survey, PRC, Inc.
Notes: Asked of all respondents.

Among those rating this issue as a “major problem,” reasons related to the following:

Prevalence/Incidence

High prevalence of use. – Other Health Provider
Widespread use. – Community Leader
It is very common in our community. – Other Health Provider
Too many people smoke, and too many young people vape. – Physician
The number of people in the community that smoke, vape, or use smokeless tobacco seems to remain high. A large number of youth under 20 also continue to smoke despite the public media campaigns that educate about the dangers of it. – Other Health Provider
Because chewing tobacco is as popular as cigarettes. – Other Health Provider
It is still a national problem in all socio-economic groups and ages. – Physician
Tobacco use has been a chronic issue in our area, and the increasing use of nicotine products (especially vaping) in adolescents that leads to tobacco use is very concerning. – Community Leader
High use rates. – Other Health Provider
There are countless smokers in the community, and we no longer offer a tobacco cessation program. – Physician
High incidence of smoking and smokeless tobacco use. – Physician
Still prominent tobacco abuse and many patients in community with sequelae of tobacco abuse. – Physician
Significant proportion of smokers/COPD. – Physician
Simple observation. – Community Leader
Again, a high number of smokers. – Other Health Provider
In a rural area with many jobs outdoors, chewing tobacco, smokeless tobacco. Vaping is a huge, huge increasing problem with teens, including THC. – Community Leader
Common use in the area of smoke and dip products. The rural community often adopts tobacco use through generations as part of the lifestyle and as a coping mechanism for stress or for social interaction. – Community Leader
Smoking and chewing tobacco are still very prevalent here, and you can witness teenagers using both substances. – Public Health Representative
Because a whole lot of people smoke, dip, or chew. Let's include vaping as well. – Social Services Provider
Frequent use, normalization of use. – Social Services Provider
Vape usage is a huge problem in my organization. Not only vape with nicotine but vaping (and other products) with THC. – Community Leader
Number of individuals who smoke, popularity of vaping and smoke shops. – Community Leader
No educated answer other than prevalent conservative views and continuation of tobacco habits as an exercise of personal freedom. – Social Services Provider
When I am in other parts of our state, I do not see nearly as many people smoking as I do locally. Also, vaping is incredibly popular among teenagers, and this is really scary considering the fact that those substances are NOT regulated. I feel that the legalization of marijuana has also encouraged/increased smoking in general. – Social Services Provider

Population is addicted to tobacco. – Social Services Provider

Impact on Quality of Life

- Many disease processes are affected by those that smoke. Providing support around those who are ready to quit is very important. – Other Health Provider
- Number of smokers is above the national average and often results in poor health. – Other Health Provider
- Tobacco creates major health problems and is widely used in our community. – Social Services Provider
- Tobacco use leads to such poor health and wellness outcomes that I believe it's important to continue to focus efforts on reducing the numbers of people engaging in this practice. – Social Services Provider

Contributing Factors

- So costly and so addictive and a health hazard, especially to younger folks. – Community Leader
- Addiction and harm caused by extended use. – Community Leader
- Prevalence. Expense. Cause of chronic disease. – Other Health Provider

Awareness/Education

- Lack of education on the long-term impacts of smoking, peer pressure. Also vaping. – Other Health Provider

Homelessness

- Homeless people or those with very low incomes have little to do with their day. My estimate is that 75% have a smoking habit. They consume very low-priced tobacco brands. – Social Services Provider

Social Norms/Community Attitude

- Use of tobacco products appears to be more socially acceptable in rural areas. Including chewing tobacco and vaping. – Community Leader

Stress

- I'm afraid I've run out of creative answers. People in my neighborhood tend to have more stress than money and look for things to ease life's pain. – Community Leader

Vulnerable Population

- LGBTQ people smoke at higher rates than the rest of the population. Much of this can be related to discrimination and other external stressors. – Social Services Provider
SEXUAL HEALTH

ABOUT HIV & SEXUALLY TRANSMITTED INFECTIONS

Although many sexually transmitted infections (STIs) are preventable, there are more than 20 million estimated new cases in the United States each year — and rates are increasing. In addition, more than 1.2 million people in the United States are living with HIV (human immunodeficiency virus).

Adolescents, young adults, and men who have sex with men are at higher risk of getting STIs. And people who have an STI may be at higher risk of getting HIV. Promoting behaviors like condom use can help prevent STIs.

Strategies to increase screening and testing for STIs can assess people’s risk of getting an STI and help people with STIs get treatment, improving their health and making it less likely that STIs will spread to others. Getting treated for an STI other than HIV can help prevent complications from the STI but doesn’t prevent HIV from spreading.

– Healthy People 2030 (https://health.gov/healthypeople)

HIV

HIV Prevalence

In 2018, there was a prevalence of 140.3 HIV cases per 100,000 population in the Total Area.

BENCHMARK ► Considerably lower than state and national rates.

DISPARITY ► Lower in Augusta County.
Sexually Transmitted Infections (STIs)

Chlamydia & Gonorrhea

In 2018, the chlamydia incidence rate in the Total Area was 377.1 cases per 100,000 population.

The Total Area gonorrhea incidence rate in 2018 was 129.5 cases per 100,000 population.

**BENCHMARK** Each is lower than the corresponding US rate. Chlamydia incidence is lower than the statewide rate.

**DISPARITY** Rates for both chlamydia and gonorrhea are lower in Augusta County. Chlamydia incidence is higher in Waynesboro.

Notes: Asked of all respondents.
Among those rating this issue as a “major problem,” reasons related to the following:

**Diagnosis/Treatment**

There are very few providers who are comfortable discussing sexual health with patients, and this deters patients from even broaching the subject. Many patients seek STI testing at urgent cares and the emergency department once they become symptomatic instead of feeling comfortable asking for routine testing. At these locations, patients only receive screening for gonorrhea and chlamydia. Many are referred to their PCP or the Health Department for HIV and syphilis testing; few follow through on this crucial testing. The health department has very limited appointments available for STI but is the only provider with options for low- to no-cost testing. – Public Health Representative

Most providers don’t treat. STI testing is limited. – Community Leader

**Contributing Factors**

Honestly, there is nothing in this area to do for teens except each other and drugs. I grew up in an area with skate parks – inside and outside, rec centers, awesome YMCA programs, the beach, and many more business that gave kids stuff to do. The kids around here are bored, and they are not being smart about their choices. I speak to you as a parent of two kids that just made it out of their teen years, telling me all the happenings in the area. Thankfully, they had the education from their mom and the strict upbringing. Some kids just don’t have that, due to no fault of their own or sometimes even their parents. Education to teens about not just birth control, but STD and STI prevention. Did you know that young teenage boys have “counts” of the girls they slept with and competition to who can get the most? This has always been the case, but the numbers of these kids are or with the goal of being over 50!!! Education for both parents and children. And others. – Other Health Provider

Lack of resources and lack of acknowledgement. – Community Leader

**Prevalence/Incidence**

STD/STI rates continue to increase. The pregnancy rate among 18- to 19-year-olds continues to be one-and-a-half to two times higher than the state average. The pregnancy rate among 15- to 17-year-olds is rising again in both Waynesboro and Staunton. – Social Services Provider

**Prevention/Screenings**

I should have maybe found a different answer here, like perhaps, “I have no idea how bad it is, but all STDs seem preventable”? – Social Services Provider

**Unsafe Sex**

I had a conversation in March about a young person in the community with HIV passing, having sexual relations with multiple partners. – Community Leader

**Teen Pregnancy**

Teen pregnancy. – Other Health Provider

HEALTH INSURANCE COVERAGE

Type of Health Care Coverage

A total of 65.0% of Total Area adults age 18 to 64 report having health care coverage through private insurance. Another 7.2% report coverage through a government-sponsored program (e.g., Medicaid, Medicare, military benefits).

Health Care Insurance Coverage
(Adults Age 18-64; Total Area, 2022)

- Private Insurance: 65.0%
- VA/Military: 5.6%
- Medicaid/Medicare/Other Gov’t: 1.6%
- No Insurance/Self-Pay: 7.9%

Sources: 2022 PRC Community Health Survey, PRC, Inc. [Item 137]
Notes: Reflects respondents age 18 to 64.

Lack of Health Insurance Coverage

Among adults age 18 to 64, 7.9% report having no insurance coverage for health care expenses.

- BENCHMARK ➤ Better than the statewide percentage.
- DISPARITY ➤ Those with lower incomes are more likely than those with higher incomes to lack health insurance.

Survey respondents were asked a series of questions to determine their health care insurance coverage, if any, from either private or government-sponsored sources.

DIFFICULTIES ACCESSING HEALTH CARE

ABOUT HEALTH CARE ACCESS

Many people in the United States don’t get the health care services they need. …About 1 in 10 people in the United States don’t have health insurance. People without insurance are less likely to have a primary care provider, and they may not be able to afford the health care services and medications they need. Strategies to increase insurance coverage rates are critical for making sure more people get important health care services, like preventive care and treatment for chronic illnesses.

Sometimes people don’t get recommended health care services, like cancer screenings, because they don’t have a primary care provider. Other times, it’s because they live too far away from health care providers who offer them. Interventions to increase access to health care professionals and improve communication — in person or remotely — can help more people get the care they need.

– Healthy People 2030 (https://health.gov/healthypeople)

Difficulties Accessing Services

A total of 45.8% of Total Area adults report some type of difficulty or delay in obtaining health care services in the past year.

BENCHMARK ➤ Worse than the national percentage.

TREND ➤ Represents a significant increase over time.

DISPARITY ➤ More often reported among women and adults younger than 65.

Experienced Difficulties or Delays of Some Kind in Receiving Needed Health Care in the Past Year

This indicator reflects the percentage of the total population experiencing problems accessing health care in the past year, regardless of whether they needed or sought care. It is based on reports of the barriers outlined in the following section.

Notes: Asked of all respondents.
Percentage represents the proportion of respondents experiencing one or more barriers to accessing health care in the past 12 months.

To better understand health care access barriers, survey participants were asked whether any of seven types of barriers to access prevented them from seeing a physician or obtaining a needed prescription in the past year.

Again, these percentages reflect the total population, regardless of whether medical care was needed or sought.

Barriers to Health Care Access

Of the tested barriers, appointment availability impacted the greatest share of Total Area adults.

**BENCHMARK** ► As barriers, appointment availability and finding a physician affected area adults more than their US counterparts. However, area adults were less affected by a lack of transportation.

**TREND** ► Compared to 2016, five categories have received significantly higher mention as barriers to care: appointment availability; finding a physician; inconvenient office hours; cost of prescriptions; and language/culture. Meanwhile, lack of transportation has received significantly lower mention.

**DISPARITY** ► Although not shown, those in Waynesboro were more likely to cite appointment availability, inconvenient office hours, and language/culture as barriers to care. Those in Staunton were more likely to cite transportation as a barrier.

Note also the percentage of adults who have skipped or reduced medication doses in the past year in order to stretch a prescription and save costs.
Barriers to Access Have Prevented Medical Care in the Past Year

Accessing Health Care for Children

A total of 5.5% of parents say there was a time in the past year when they needed medical care for their child but were unable to get it.

TREND ▶ Denotes a significant increase since the 2019 survey.

Had Trouble Obtaining Medical Care for Child in the Past Year
(Parents of Children 0-17)

Surveyed parents were also asked if, within the past year, they experienced any trouble receiving medical care for a randomly selected child in their household.
Key Informant Input: Access to Health Care Services

Key informants taking part in an online survey most often characterized Access to Health Care Services as a "moderate problem" in the community.

Notes: Asked of all respondents.

Among those rating this issue as a "major problem," reasons related to the following:

Contributing Factors

Transportation. As a physical therapist, our patients often can't make it to their therapy appointments to get the care that they need due to lack of consistent transportation. Lack of rehab services and adult day care services for patients and their families with significant impairments from long term chronic illness or disability. – Other Health Provider

Transportation and lack of behavioral health services along the continuum of care. – Other Health Provider

Lack of transportation. Lack of trust of hospitals in general. Lack of insurance or high deductible insurance and families living check to check. – Social Services Provider

Transportation, poverty rates, access to affirming providers and safe spaces. Lack of available services that speak directly to LGBTQ+ health needs, particularly access to PrEP, readily available STI testing, etc. – Social Services Provider

Literal access in terms of transportation for those without cars, also lack of insurance or high deductible plans, inability to find a general care provider resulting in overuse of emergency room services. – Social Services Provider

Transportation, geographic barriers for rural residents, mobility/disability, poverty and greater number of uninsured, financial constraints, great number of social determinants of health barriers, racial and health inequities, minimal providers for LGBTQ and Hispanic populations. – Other Health Provider

There are several: transportation, lack of funds, lack of education, cultural barriers. – Other Health Provider

Transportation remains a barrier for folks, although access to telehealth across the pandemic has provided some relief. Stigma associated with accessing mental health care specifically. Cost of healthcare services and medication, which could tie back to a larger issues like lack of affordable housing and well-paying jobs in the area. Lack of providers and wait lists for both physical and mental health care. No insurance, or insurance only covering certain costs associated with healthcare. A general lack of understanding around accessing mental health/substance use services. A strain on the workforce due to being understaffed and the effects of the pandemic in general creates retention issues which further exacerbate the aforementioned issues. – Social Services Provider

Transportation is a huge barrier to accessing health care services – people may have a doctor but no way of getting to their appointments or picking up their prescriptions. Not having health insurance is also a barrier – there are many people who would qualify for Medicaid but don’t know how to apply for it. Lack of trust in the health system also contributes to lack of access to healthcare services for certain populations of the community. – Other Health Provider

Transportation. Low health literacy, not understanding the depth of the disease nor that small changes may be impactful when dealing with their health issues. – Other Health Provider

Cost and transportation. – Other Health Provider

This is multilayered. Expense, even if insured. Preventative health care is not a priority. Expense of medications decreases motivation to be proactive about health. Trust in healthcare system, suspicious of profit motive. – Other Health Provider
High copays and coinsurance, challenging financial assistance process, lack of transportation services, limited number of providers impacts appointment availability (especially behavioral health and specialty care), language and cultural barriers to care – lack of diversity of our healthcare workforce. – Other Health Provider

Cost, availability of providers. – Community Leader

Affordable care. Choice of competent providers. Transportation to services. Childcare for families where the adults need to access health care. – Other Health Provider

Community members in need of services are often “waitlisted” and unable to access the services that are needed. Additionally, barriers to access include not enough qualified professionals, cost of needed services, lack of understanding/connection to possible resources. – Community Leader

Not enough providers and services for the need that is in our community. Wait times to be seen are astronomical, and the frustration level of individuals is extremely high. Transportation is an issue that needs to be addressed. Affordable services for families not on government assistance are barriers as well. – Social Services Provider

Provider shortages (adult and pediatric), poverty (increased number of uninsured), and proximity to providers/services in more rural areas and affordability. – Social Services Provider

Language barrier (need bilingual staff, health interpreters), transportation, affordable health care prices, prevention education, underserved community needs to feel inclusion. – Social Services Provider

The most significant challenge for Latinx population: LANGUAGE ACCESS. Need more Spanish-speakers on administrative and medical staff. Use certified medical interpreters instead of tele-health. FINANCIAL SERVICES. As for Augusta's financial assistance, we have many reports of patients being discouraged from applying because their income places them above the 200% federal poverty guidelines. If patient nets 2k a month, they do not qualify. Raise the poverty guidelines to 300%, consistent with area providers (ARDC, Carilion, UVA). Patients are, moreover, overwhelmed by several bills – one from Augusta, another from the medical group, then another from the specialist, yet another from the anesthesiologist, and one more from the ambulance. Even if they can access financial assistance from Augusta, it is of little assistance when several different medical services are billing the patient. DIGNIFIED TREATMENT. Many reports of poor treatment from admin and staff alike. – Social Services Provider

Uninsured and underinsured patients have very limited local options. Staunton/Augusta/Waynesboro is not served by a federally qualified health center. Although many people in the area do have personal vehicles, they often lack money for gas to drive as far as Harrisonburg or Lexington to visit an FQHC. There is no Planned Parenthood clinic in the area, either, or the local health departments have reduced the extent/frequency of clinical services. As a result, people go to the emergency department for conditions that should be managed in a PCMH and/or postpone healthcare until the problem has exacerbated. In addition, I do not know where to refer people for facilitated enrollment in ACA health plans. – Public Health Representative

Transportation

Not having access to internet, health insurance, transportation. – Other Health Provider

Because we are a large rural community, many patients do not have access to services such as the BRITE Bus, which has multiple stops in the city, or patients are in too poor health to walk to a bus stop. These services do not serve the rural areas such as Deerfield, Churchville Greenville. Medicaid transportation system is overloaded and often unreliable. Some patients live in rural areas that Medicaid transport has difficulty finding and accessing. – Other Health Provider

Based on my professional responsibilities as a partner with AH in the cancer space, I would say transportation and financial challenges are expressed the most by patients traveling from such a large, rural catchment area for cancer treatment. Access to reliable transportation and/or the financial support to gain access to reliable transportation. – Social Services Provider

Transportation. – Social Services Provider

Transportation from the majority of the county. Lack of technology or phone service to access telehealth options. – Social Services Provider

For the area residents we serve, the biggest challenge is finding reliable, accessible, and affordable transportation to health care services. – Social Services Provider

Vulnerable Population

Immigrants from other countries. – Community Leader

Transgender health care. There are no providers in this area that offer affirming services to the trans community. Providers are not inclusive, and this can be very damaging to a trans person and inhibit progress in their health journey. – Public Health Representative

Minority or underinsured access to health care. We are no different than every other community in the country where this is an issue. – Physician

Lack of access to health services for immigrants. – Social Services Provider

For the vulnerable populations that exist in our community, I believe there are many barriers that exist that limit accessing health care services. That can include insurance coverage, documentation of citizenship/lack of trust with healthcare system, transportation barriers, and homelessness. – Other Health Provider
The LGBTQ community struggles to find health care services that are affirming and inclusive. Many LGBTQ people put off accessing health care services for fear of discrimination. Insurance and financial insecurity are also major challenges to accessing services. – Social Services Provider

Affordable Care/Services

Affordability. Even with insurance and relatively well-paying jobs, health costs are a major barrier to obtaining adequate health care. – Other Health Provider

I just think there are so many financial barriers to health care historically that people in culture just try to figure it out the best they can on their own unless it's immediately life-threatening. Even with insurance, there isn't often left money for copays. In the Black community, we see an average of 11 times less the wealth in this country, and that means some things that are absolutely vital are seen as luxuries. – Community Leader

Loss of the free clinic. Large Hispanic population without insurance. – Community Leader

Access to Care/Services

Access to care is "OK" within the two cities included in this survey, but Augusta County is one of the state's largest – and is extremely rural. Health care resources are "bunched" in the eastern half of the county. Residents who live west and south of Staunton must drive anywhere from 10 to 40 miles to reach even the most basic health care facility. (Craigsville, west of Staunton, is an example of one office/clinic that has had repeated bad luck in remaining operational.) I cannot understand why "mobile clinics" are not available. – Community Leader

Access to mental health and substance services are the biggest concerns I see. They overlap with diabetes due to the weight gain that happens with MH treatment. It can take over two months to get an intake for MH. – Other Health Provider

Lack of Providers

There is simply just not enough of providers, particularly physician-providers. There is also too much instability in the provision of physician services, with the coming and going of so many doctors (is very hard to establish a good working relationship with a doctor when there are so many doctors who join and work a couple years here, and then go elsewhere). – Community Leader

Stigma

An entire reworking of how the medical field interacts with individuals pertaining to mental health diagnosis needs to happen ASAP. THE STIGMA surrounding mental health diagnosis and substance use disorders is an epidemic in and of itself. We need a change in the way professions treat humans as a whole, mentally and physically! – Social Services Provider

Government Funding

It's difficult to get government and consolidated community support to confront the issues. Community seems fragmented, and state funding sources are scarce. – Other Health Provider

Health Literacy

Follow-up care and patient education support. There is a major gap in how well a patient can understand and follow care instructions, test results, next steps when it is shared solely in written English or through an interpreter (professional interpreter or untrained family member chosen by a deaf patient to communicate). More can be done in this area of concern. Perhaps clearer, plain language handout materials with visual images. Perhaps developing trained community health workers who are bilingual and bimodal (can translate written materials into ASL). [See: https://www.nih.gov/health-information/nih-clinical-research-trials-you/guidelines-communicating-informed-consent-individuals-who-are-deaf-or-hard-hearing-scientists-and-"sign-here-how-to-conduct-informed-consent" https://youtu.be/HIPGWjJVnej] – Social Services Provider

Lack of Continuity of Care

There are services in the area, yet they do not communicate with one another. For example, the hospital has its own psychiatric services, and then there are outpatient therapy services that do not have one vision. Continuity of care is a problem. – Other Health Provider
PRIMARY CARE SERVICES

ABOUT PREVENTIVE CARE

Getting preventive care reduces the risk for diseases, disabilities, and death — yet millions of people in the United States don’t get recommended preventive health care services.

Children need regular well-child and dental visits to track their development and find health problems early, when they’re usually easier to treat. Services like screenings, dental check-ups, and vaccinations are key to keeping people of all ages healthy. But for a variety of reasons, many people don’t get the preventive care they need. Barriers include cost, not having a primary care provider, living too far from providers, and lack of awareness about recommended preventive services.

Teaching people about the importance of preventive care is key to making sure more people get recommended services. Law and policy changes can also help more people access these critical services.

– Healthy People 2030 (https://health.gov/healthypeople)

Access to Primary Care

In 2021, there were 114 primary care physicians in the Total Area, translating to a rate of 90.9 primary care physicians per 100,000 population.

DISPARITY ➤ Higher in Staunton.

Access to Primary Care
(Number of Primary Care Physicians per 100,000 Population, 2021)

Sources: US Department of Health & Human Services, Health Resources and Services Administration, Area Health Resource File.

Notes: Doctors classified as “primary care physicians” by the AMA include General Family Medicine MDs and DOs, General Practice MDs and DOs, General Internal Medicine MDs, and General Pediatrics MDs. Physicians age 75 and over and physicians practicing sub-specialties within the listed specialties are excluded. This indicator is relevant because a shortage of health professionals contributes to access and health status issues.
Specific Source of Ongoing Care

A total of 76.9% of Total Area adults were determined to have a specific source of ongoing medical care.

**BENCHMARK ➤** Fails to satisfy the Healthy People 2030 objective.

**Have a Specific Source of Ongoing Medical Care**

Healthy People 2030 = 84.0% or Higher

2020 PRC National Health Survey, PRC, Inc.

Notes: Asked of all respondents.

Utilization of Primary Care Services

Adults

Two-thirds of adults (66.3%) visited a physician for a routine checkup in the past year.

**BENCHMARK ➤** Less favorable than the statewide finding.

**TREND ➤** Declining significantly over time.

**DISPARITY ➤** Lower in Augusta County. Note the positive correlation with age.
Have Visited a Physician for a Checkup in the Past Year

(Total Area, 2022)

Children

Among surveyed parents, 83.8% report that their child has had a routine checkup in the past year.
Child Has Visited a Physician for a Routine Checkup in the Past Year (Parents of Children 0-17)

- **Total Area:** 83.8%
- **US:** 77.4%

         2020 PRC National Health Survey, PRC, Inc.

Notes: Asked of all respondents.
ORAL HEALTH

ABOUT ORAL HEALTH

Tooth decay is the most common chronic disease in children and adults in the United States. …Regular preventive dental care can catch problems early, when they’re usually easier to treat. But many people don’t get the care they need, often because they can’t afford it. Untreated oral health problems can cause pain and disability and are linked to other diseases.

Strategies to help people access dental services can help prevent problems like tooth decay, gum disease, and tooth loss. Individual-level interventions like topical fluorides and community-level interventions like community water fluoridation can also help improve oral health. In addition, teaching people how to take care of their teeth and gums can help prevent oral health problems.

– Healthy People 2030 (https://health.gov/healthypeople)

Dental Insurance

In the Total Area, 7 in 10 adults (72.1%) have dental insurance that covers all or part of their dental care costs.

BENCHMARK ► Satisfies the Healthy People 2030 objective.

TREND ► Denotes a significant increase over time.

Have Insurance Coverage That Pays All or Part of Dental Care Costs

Healthy People 2030 = 59.8% or Higher

Sources:
- 2022 PRC Community Health Survey, PRC, Inc. [Item 21]
- 2020 PRC National Health Survey, PRC, Inc.

Notes:
- Asked of all respondents.
Dental Care

Adults

A total of 61.9% of Total Area adults have visited a dentist or dental clinic (for any reason) in the past year.

**BENCHMARK** ▶ Less favorable than found across Virginia. Satisfies the Healthy People 2030 objective.

**TREND** ▶ Represents a significant decrease over time.

**DISPARITY** ▶ Those less likely to report receiving dental care include young adults, lower-income respondents, and adults without dental insurance.

**Have Visited a Dentist or Dental Clinic Within the Past Year**
**Healthy People 2030 = 45.0% or Higher**

Children

A total of 74.9% of parents report that their child (age 2 to 17) has been to a dentist or dental clinic within the past year.

BENCHMARK ► Satisfies the Healthy People 2030 objective.

TREND ► Denotes a significant decrease over time.

**Child Has Visited a Dentist or Dental Clinic Within the Past Year**
*(Parents of Children Age 2-17)*

Healthy People 2030 = 45.0% or Higher

---

**Key Informant Input: Oral Health**

Key informants taking part in an online survey most often characterized Oral Health as a “moderate problem” in the community.

**Perceptions of Oral Health as a Problem in the Community**
*(Key Informants, 2022)*

- Major Problem: 22.4%
- Moderate Problem: 41.4%
- Minor Problem: 30.3%
- No Problem At All: 5.9%

**Note:** Asked of all respondents.
Among those rating this issue as a “major problem,” reasons related to the following:

**Insurance Issues**

- Lack of insurance and lack of dentists that provide care on a sliding scale or accept public insurance. – Social Services Provider
- Lack of dentists that accept Medicaid, free dental program has limited availability. – Community Leader
- Very few resources for patients without dental insurance. This affects their entire health, including diabetic control. – Physician
- Access to dental care for uninsured and underinsured individuals. Many Medicaid plans now have dental coverage, but no providers accept the plans. – Social Services Provider
- Poor dental coverage for Medicaid and Medicare patients. Cost of care even with insurance. Very poor options for dentures (edentulous people can’t find good jobs). – Other Health Provider
- Dental insurance isn’t an automatic for most people. – Community Leader
- Many people in the area do not have dental insurance. – Other Health Provider
- Limited access to dental insurance plans and cost of dental repairs. – Other Health Provider

**Contributing Factors**

- Lack of dental insurance for low-income families. Lack of early intervention (dentistry) for youth, which leads to more severe oral health problems as adults. – Social Services Provider
- A lack of dental insurance for many individuals and a lack of dentists that provide care to patients who are self-pay or have government-assisted insurance options. Also, while there are many dentists in the area, many are not open five days a week and almost none are available on weekends or after 4 or 5 p.m. This makes it very challenging for those who cannot take time away from work to access care, even if insurance is not the problem. – Social Services Provider
- Lack of dental insurance, substance abuse, and mental health issues all lead to poor oral health. – Community Leader
- Where do I begin? This is huge. When I first moved here, the lack of healthy teeth in every smile I met was disheartening. The culture of the generation before us, not needing to take care of teeth, still remains ... and now they are seeing the consequences of bad oral hygiene, except they passed that around to their kids, too, which are now adults. Drugs are a HUGE problem in this area, as well, which destroy teeth. I feel that our community is scared of the dentist. I was just in getting dental work done at my dentist and heard a man in the next bay which was being told that his toothache was due to a decayed tooth next to the root. He was offered a root canal (which are very expensive) or to just pull the tooth. The dentist also asked him to set up a cleaning and he strongly refused, as the last time he had a cleaning he was “crying for the next two days in pain,” which was 10 years ago. He is a grown, elderly man afraid of the dentist. – Other Health Provider
- Aging population, cost of dental care, drug use. – Social Services Provider
- Methamphetamine is rampant and this drug wreaks havoc on oral health. Also, lack of insurance to pay. Many dentists do not take Medicaid/Medicare, so any work is “out of pocket.” This is often not affordable. – Social Services Provider
- The answer for poor people is to pull teeth. Preventative care isn’t a priority, and the dentist hurts. Pulling teeth means dentures eventually, and insurance doesn’t cover them. Apparently, chewing food is a luxury. – Social Services Provider

**Prevalence/Iincidence**

- Issue throughout the nation. – Physician
- Valley Supportive housing has 42 tenants in its 42 apartments. Virtually 100% have oral health problems. We have gotten grants from Delta Dental and then sponsored denture treatment. – Social Services Provider
- I see this need on a daily basis. – Social Services Provider
- From what I’ve observed in helping with a meal program, there seems to be need for this in the Waynesboro area. – Social Services Provider

**Affordable Care/Services**

- Patients who do not have sufficient financial resources have difficulty accessing dentistry. – Physician
- Our free dental clinic is at capacity, which results in long waits for persons needing care. – Public Health Representative
- So many people cannot afford to go to a dentist. I have met so many people who have not been to a dentist since they were children. Even if you have dental insurance, it is very limited what the insurance will cover. – Other Health Provider
There is an alarming lack of dental/affordable dental care option in our area. The Augusta Regional Dental Clinic is routinely at capacity, and there is no other facility in the county. It is therefore almost impossible for Medicaid members to find a provider. Even for children. This leads to community members waiting until the last moment to seek treatment and go to the ER/urgent care. There is also a general lack of education and awareness on the importance of dental care, oral hygiene, and healthy eating habits. – Social Services Provider

Access to Care/Services

Access to timely and affordable dental care (preventive and restorative) for adults. – Community Leader

The biggest problem in terms of dental care is access and availability. – Social Services Provider

Unable to get appointments for patients with acute needs. Limited participation with Medicare and Medicaid. – Other Health Provider

Co-Occurrences

I know that it contributes to so many secondary issues, such as nutrition, and it is not universally available to impoverished families. – Community Leader

Impact on Quality of Life

Dental care is one of the important elements of overall health and impacts every aspect of being healthy – weight, nutrition, heart health, digestive health, etc. Maintaining oral health in children is critical to their success in school and beyond. Prevention is key. – Community Leader
VISION CARE

A total of 63.1% of Total Area residents had an eye exam in the past two years during which their pupils were dilated.

DISPARITY ➤ Those less likely to report receiving vision care include men, young adults (note the correlation with age), and lower-income residents.

Had an Eye Exam in the Past Two Years During Which the Pupils Were Dilated
Healthy People 2030 = 61.1% or Higher

Notes:
- Asked of all respondents.
LOCAL RESOURCES
PERCEPTIONS OF LOCAL HEALTH CARE SERVICES

A majority of Total Area adults rate the overall health care services available in their community as “excellent” or “very good.”

Rating of Overall Health Care Services Available in the Community (Total Area, 2022)

However, 12.2% of residents characterize local health care services as “fair” or “poor.”

**BENCHMARK** ▶ Worse than the US percentage.

**TREND** ▶ Marks a significant increase from the 2016 baseline.

**DISPARITY** ▶ Lower in Augusta County. More often reported among young adults, lower-income residents, and those with difficulty accessing services.

Perceive Local Health Care Services as “Fair/Poor”
Perceive Local Health Care Services as “Fair/Poor”
(Total Area, 2022)

Notes: Asked of all respondents.
HEALTH CARE RESOURCES & FACILITIES

Federally Qualified Health Centers (FQHCs)

The following map details Federally Qualified Health Centers (FQHCs) within the Total Area as of September 2020.
Resources Available to Address the Significant Health Needs

The following represent potential measures and resources (such as programs, organizations, and facilities in the community) identified by key informants as available to address the significant health needs identified in this report. This list only reflects input from participants in the Online Key Informant Survey and should not be considered to be exhaustive nor an all-inclusive list of available resources.

### Access to Health Care Services

## EVALUATION OF PAST ACTIVITIES

### 2020-2022 Implementation Strategy: Internal Plan

#### Access to Health Care

<table>
<thead>
<tr>
<th>Program/Activity</th>
<th>Action Steps</th>
<th>Accountability</th>
<th>Timeline</th>
<th>Budget</th>
<th>Impact will be Measured through these Indicators</th>
</tr>
</thead>
</table>
| Homeless Healthcare Connection provides people experiencing homelessness on-site as well as a mobile access to health care services and social services in order to reduce barriers to accessing health care. Through health screenings, health education, vaccinations, sexual health screenings and resource referrals, including assistance with transportation and case management, participants are able to learn new lifestyle practices which encourage wellness and chronic disease management. | 1. Provide health education, screenings and basic first aid to those individuals experiencing homelessness at Valley Mission, WARM, Disciple’s Kitchen and Waynesboro Library.  
2. Collaborate with agencies to connect clients with health and social resources in the community.  
3. Explore and Implement Prescription courier service implemented for individuals experiencing homelessness at Valley Mission and WARM.  
4. Replicate HHC program in the Hispanic/Latinx community | Gayle Shultz  
1. 2020-2022  
2. 2020-2022  
3. 2020-2022  
4. 2021-2022 | 1. $3,850  
1. Number of unique encounters  
   **2020**: 92 (80 individual intakes completed)  
   **2021**: 326 (Majority of these encounters were for COVID/FLU vaccines ONLY—which also includes 1, 2, and 3 doses)  
   **44 intakes were completed through traditional HHC program**  
2. Number and percentage of participants screened:  
   - blood pressure  
     **2020**: 56/92 =60.8%  
     **2021**: 9/44 =20.45%  
   - heart rate  
     **2020**: 40/92 =43.4%  
     **2021**: 1/44 =0.2%  
   - oxygen saturation (O2 Sat)  
     **2020**: 38/92 =41.3%  
     **2021**: 1/44 =0.2%  
   - prediabetes risk  
     **2020**: 9/92 =9.7%  
     **2021**: 3/44 =6.8%  
   - mental health  
     **2020**: 7/92 =7.6%  
     **2021**: 0/44 =0%  
   - foot screenings for those with diabetes  
     **2020**: 2/12 =16.6%  
     **2021**: 0/44 =0%  
3. Number and percentage of participants screened who are high/positive:  
   - blood pressure  
     **2020**: 19/56 =33.9%  
     **2021**: 5/9 =55.5%  
   - heart rate  
     **2020**: 5/40 =12.5% |

Faith Community Nursing (FCN) is a specialized practice of professional nursing that focuses on the intentional care of the spirit as well as the promotion of whole-person health and the prevention or minimization of illness through screenings, health education, and referrals to health care resources.

1. **Conduct a Social Determinants of Health screening in Faith Communities**
2. **Conduct a community FCN sponsored health fair or health education event**
3. **Collaborate with Faith Communities to sponsor and conduct COVID vaccine and Flu vaccine clinics within Faith Communities**
4. **Engage additional Faith Communities to increase FCN membership in the network**

| Increase the proportion of primary care physicians and advanced practitioners who screen patients for depression during office visits. The target population for 2020 – 2022 will include all adolescents and adults, with emphasis on the following high risk groups: post-partum women, seniors 65+, and veterans. | 1. The program will utilize depression screenings built into Athena that are done during AMG primary care office visits. Screening rates and rates for documentation of a follow-up plan for those who screen positive will be tracked and reported, based on the CMS sample of patients provided to Augusta Care Partners for annual reporting.  
2. Partner with Hospice of the Shenandoah to conduct depression screenings during home health and hospice patients visits.  
3. Partner with local obstetrician practices to conduct depression screenings during post-partum follow-up visits.  
4. Partner with the Veterans Affairs Medical Clinic in | Krystal Moyers  
Dr. Clint Merritt | 1. 2020-2022  
2. 2021

The Pain Management (Opioid) Stewardship Committee is a multidisciplinary team responsible for promoting the proper use of pharmacologic and non-pharmacologic treatments for pain in patients within the Augusta Health system and community.

1. The scope of the committee shall include engaging with key stakeholders to review and revise existing order sets, monitoring data related to pain management, and conducting a gap analysis to identify opportunities for improvement.

2. The committee will make formal recommendations related to opioid use and pain management, including the use of non-pharmacologic interventions and non-opioid medications.

3. The committee will coordinate educational activities for staff, prescribers, and patients.

4. Recommendations will be developed related to pain specialist referral and referral to substance abuse treatment programs as appropriate.

Launch Tobacco Cessation Clinic within Augusta Medical Group to provide patients who would like to quit using tobacco products with physical, behavioral and medication support services.

1. Staff will complete the Duke-UNC Tobacco Treatment Specialist Training (TSS) program
2. Staff will obtain TSS certifications as required
3. Develop a rack card for advertising and marketing of the Tobacco Cessation Clinic
4. Screen all clients on previous methods used for tobacco cessation
5. Clinical operations are established and clients are seen on a regular basis
6. Establish the use of telemedicine in the initial phase of the tobacco cessation clinic
7. Establish a Mindfulness-based Support Group for smokers, led by Clinic's LCSW

This program consists of community-directed programs (such as Get Fresh) and curriculum aimed at preventing or delaying the onset of prediabetes and type II diabetes in youth. It may consist of classroom nutrition education, fresh food tastings, field trips to local farms, cooking lessons, summer camps and/or afterschool nutrition programming for the entire family, thus promoting the development of healthy habits and lifestyle changes to improve nutrition, overall health and in turn help prevent diabetes.

SYNC is an innovative, team-based, collaborative experience that emphasizes hands-on problem solving. Utilizing this model, diabetes workgroup members will work to identify a specific challenge surrounding diabetes or prediabetes in their community, apply the SYNC concepts, and implement a solution.

| 1. Workgroup will identify a specific community or organizational need surrounding diabetes or prediabetes | Gayle Shultz, Stephanie Mims, Caroline Hackley, Michael Campbell, Marvella Rea, Clint Merritt, Abby Calvert | 2020-2021 | Grant-funded | 1-2 |
| 2. Workgroup will attend webinars and hands-on SYNC workshops | | 2020-2021 |
| 3. Develop action steps and strategies for increasing the number of referrals to Community Health Worker | | 2020-2021 |
| 4. Develop action steps and strategies to increase the total number of diabetic patients working with Community Health Worker | | 2020-2021 |

| 1-2 | a) Total number in workgroup attending SYNC webinars and workshops |
| | 2020: 6 |
| | 2021: N/A |
| | 3-4 |
| a) Total number of diabetic patients working with a Community Health Worker (CHW) |
| 2020: 3 |
| 2021: 17 |
| b) Total number of diabetic referrals received by Community Health Worker |
| 2020: 3 |
| 2021: 40 |
Participate in a learning collaborative to design and implement an Upstream Quality Improvement Campaign to address health-related social needs for patients in the community using a stepwise approach to move upstream. The learning collaborative will focus on the high rate of hospital encounters at Augusta Health among adult diabetics in a four zip code area that includes Craigsville, Buena Vista, Staunton and Waynesboro.

| 1. Engage the Blue Ridge Area Food Bank and related pantries as a distribution resource for produce from the AMI Farm at Augusta Health and partner with them to leverage their “Nourish” stoplight food guide program to the four targeted zip codes. | Dan O’Connor  Amy Hougan  Mary Arrowood  Penny Cooper  Krystal Moyers  Clint Merritt | 1. 2020  2. 2021-2022  3. 2021-2022 | 2020- $5,250  2021-$5,250 |
| 2. Engage as many key stakeholders as possible for assistance with potential Social Determinants of Health screenings. |  |  |  |
| 3. Hold Food Farmacy cohorts for targeted populations |  |  |  |

1. Number of tons of food delivered to targeted zip codes (Goal: Two tons)  
   2020: .75 ton  
   2021: N/A

2. Baseline of total diabetics in our EMR in the targeted zip code areas, measuring percent of screenings completed at Augusta Health (Goal: 10%)  
   2020: N/A  
   2021:  
   a) Craigsville—20 patients screened food insecure, 6 were diabetic.  
   b) Buena Vista—29 patients screened food insecure, 6 were diabetic.  
   c) Staunton—319 patients screened food insecure, 73 were diabetic  
   d) Waynesboro—239 patients screened food insecure, 55 were diabetic  
   Total number of community SDH screenings completed as a percent of census reported population in the set time period (Goal: 10%)  
   2020: N/A  
   2021: 1%

3. Presence of Food Farmacy cohort in each zip code area (Goal: 1 in each of 4 zip codes)  
   2020: N/A  
   2021: Staunton and Waynesboro

1-3. a) Reduce hospital encounters among diabetics by 10% in our targeted zip code area in 2022  
   2020: N/A  
   2021: N/A
Increase awareness and utilization of the health coaching program within the community.

| 1. Develop a prediabetes group health coaching cohort  
2. Work with community partners to offer community health coaching | 1. Stephanie Mims, Sarah Martin, Michael Campbell  
2. Stephanie Mims, Sarah Martin | 1. 2021-2022  
2. 2020-2022 | 1. $1,650  
2. $2,000 |

1. Total number of participants
   2021: 4 enrolled; 4 completed (100%)

The Nutrition Awareness Program utilizes the Augusta Health cafeteria, cafes and vending as venues for nutrition information dissemination with regard to healthier food choices and food preparation methods, as well as provides access to healthier foods through the continuation of Sodexo’s Mindful Program.

1. Focus on the Jazzman’s venue in the Wellness building with a goal of 50% food and beverage items compliant with Sodexo’s Mindful criteria.
2. Provide Mindful Meal “punch cards” to use when eating at venues. Free meal after punch card is full.
3. Work with Canteen (vending machine vendor) to make 30% of options healthier choices.

Walkability Initiatives such as Walk to School Week, the Walk-Bike Summit, and walking clubs help to promote and increase physical activity in the community by:

- Providing a safe space for students to walk to school and learn pedestrian safety
- Bringing awareness of how to make Staunton, Augusta County, and Waynesboro more walk and bike-friendly
- Promoting physical activity for students during recess time at school
